The WebMD Ignite Education Content V3 API is a RESTful API service that will support internal product design and delivery while also enabling clients and partners to access Ignite Education content to create dynamic and innovative consumer health engagement solutions.

**This documentation will be iterative as new services are added to the Ignite Education Content solution.**

## Ignite Education Content Basics

The API will only return the content resources associated with a client's license. Content is typically licensed by Source (HealthSheets, Ignite Education Clinical Videos, Exit-Writer Discharge Instructions, etc.).

Detailed tables in the Appendix provide detailed information about each content source, content type ID and associated metadata. One table provides information for a typical clinical license and use case; the second for a typical consumer license and use case. A third table provides detailed language codes by content (Appendix - page XX).

### Token and Endpoint URL

Below are the staging and production URLs for tokens and endpoints. The client should use the URL per the REST API staging or production credentials.

#### Token URL:

Production URL: <https://identity.krames.com/connect/token>

#### Endpoint URL

Production URL: <https://api.krames.com/>

### Content Variations

Each content resource has a variety of attributes. Some describe variants of a resource such as Version or Language. The Content ID does not change with these variants.

- Version (Same Content ID)
- Language (Same Content ID)

Content resources in different Media types (document or video) also have different Content IDs.

- Media (Different Content ID)

### Video content

Videos: The request for the streaming media format includes the URL to the video in the content delivery network (CDN) and the video transcript. The URL can be used in the video player of the client's choice.

Video HealthSheet: Clients can use the Video HealthSheet to print information for a consumer or patient. The consumer can then scan the QR code or use the short link to access the video. If a client licenses both Videos and Video HealthSheets, both resources can be accessed through the API.

### Example of API request where mediatype = video:

[https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen\(12 - 18 yrs\)&mediatype=Video](https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen(12-18yrs)&mediatype=Video)

**Example of QR code video within client app or website:**

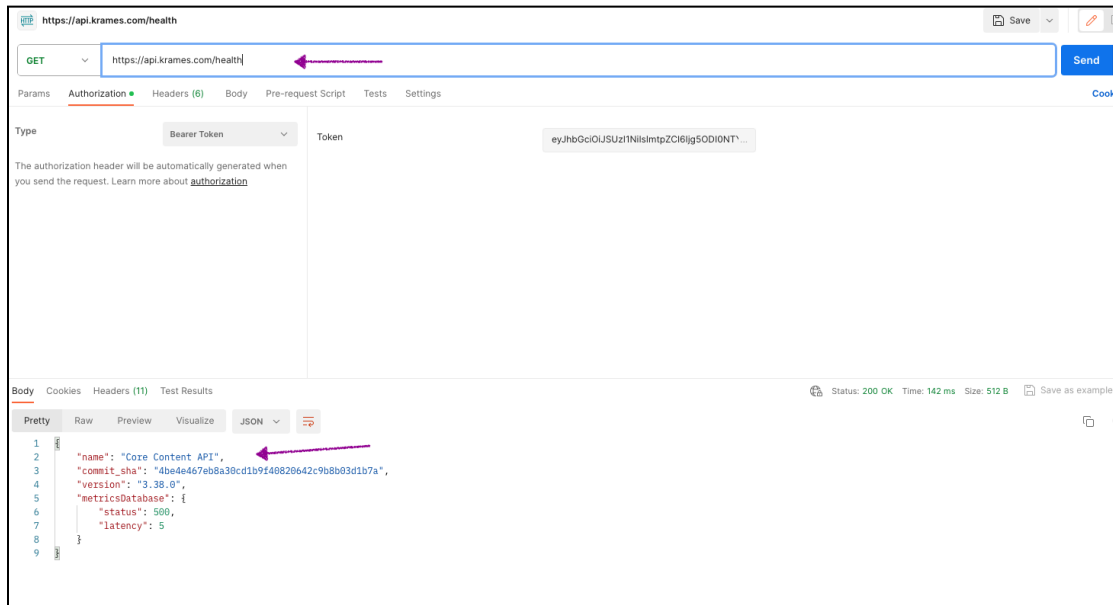

**Content Versioning**

A version key will be generated and returned in the JSON response when retrieving content. By default, the current content version will be returned via the API, when no version is specified. Search results do not contain version information; the search index always contains the latest version of the content.

**API Request to check the content version and API health:**

https://api.krames.com/health

## Content Source

Ignite Education content is designed for two general use cases:

1. integration into a clinical application and workflow, and,
2. integration into a consumer-facing application.

Detailed tables in the Appendix provide an overview of the content resources available. Each content resource is identified by a Content Type ID (numeric code) and a Source which is the text description of the Content Type ID.

Note: The specific content sources available via the API is determined by a **client license**. If the content type is not included in the client license, it will not be returned through search or get content requests.

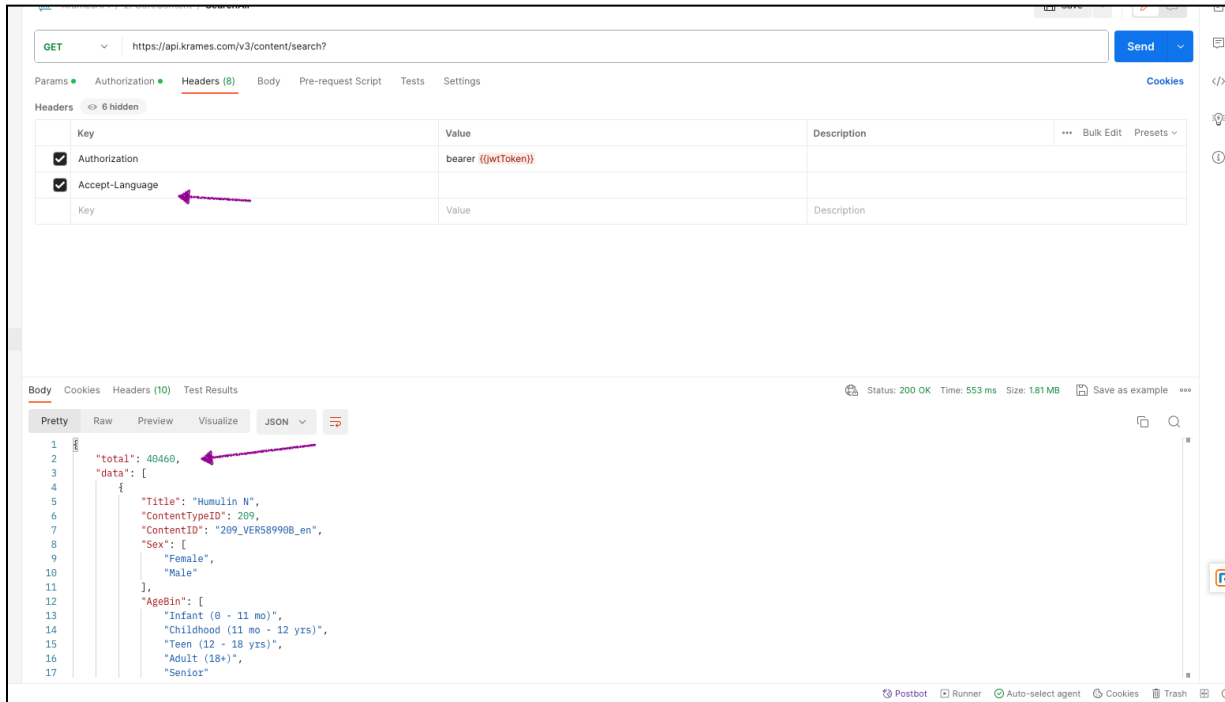

## Languages Supported

Language is a required attribute of any content item. All API endpoints utilize an HTTP `accepts-language` header, AND a querystring parameter for language, these will default to `en` if unspecified. The value of the query string parameter `language` will take precedence over the `accept-language` header.

This will pull all the English articles

Accept-Language - en or blank, this will retrieve all the English articles under the license.

GET <https://api.krames.com/v3/content/search?> Send

Params • Authorization • **Headers (8)** • Body • Pre-request Script • Tests • Settings Cookies

 May not be reproduced or redistributed without the express permission of WebMD Ignite.

https://api.krames.com/v3/content/82-116092en

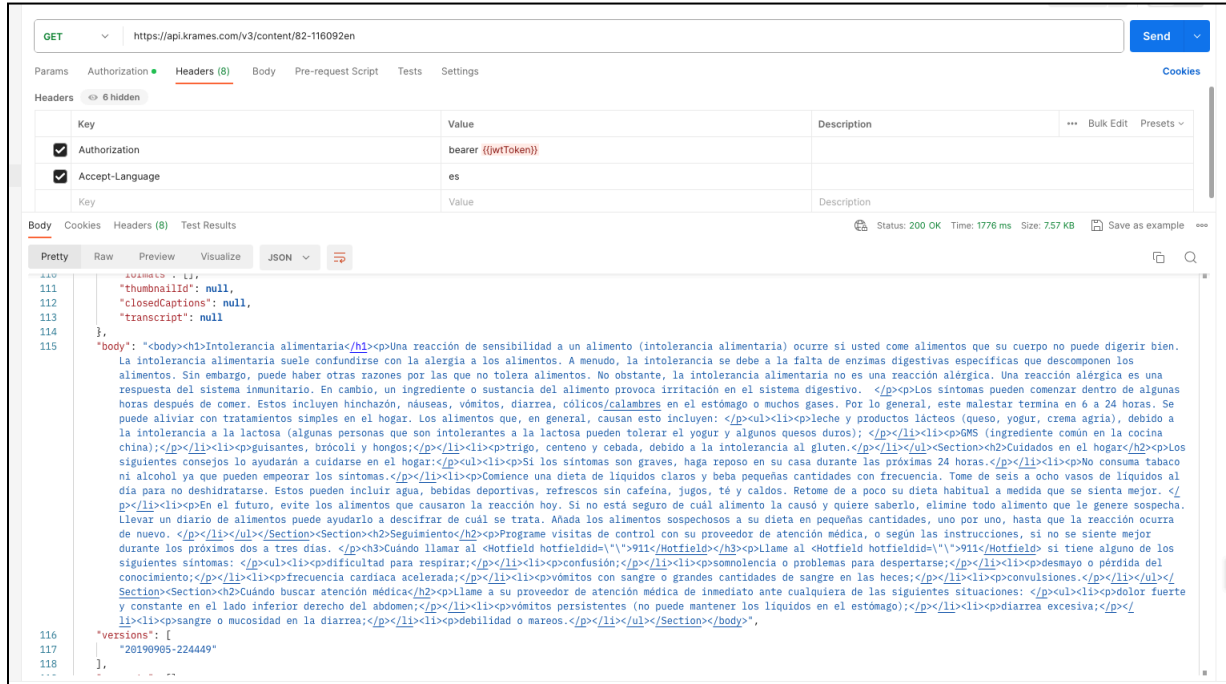

Table 3 in the Appendix provides an overview of the content and the languages supported. Ignite Education uses the ISO 639-1 Code standards for language abbreviations, and ISO 639-2 for languages that are unavailable in ISO 639-1.

When using the GET content endpoint, this language parameter will be used to retrieve the document in the language the parameter specifies, if it is available. When calling the Search endpoint with a language parameter in this way, this will search Ignite Education content that is available in that language. So, any terms present in a search performed in this manner will need to also be in the same language that was specified.

### Segmented Content

Segmented content enables a client to request a specific section of a document to display or to enable a client to control the navigation within a segmented document. Segments have been defined for a small set of content assets from the Consumer Health Library. Within this content type, standard segments have been defined and can be identified. See Table 4 in the Appendix for detailed information.

### Endpoint Base URL

The content endpoints described below should use this base URL:

Production URL: <https://api.krames.com/>

Requests to these endpoints require authorization. Authorization should be sent in a header with the key “Authorization”, and the value should be “bearer <your token from the identity server>”.

## Production environments

We recommend completing all development against the Ignite Education API in our production environment.

## Authentication

To retrieve a bearer token, an authorization request should be made to our identity server using:

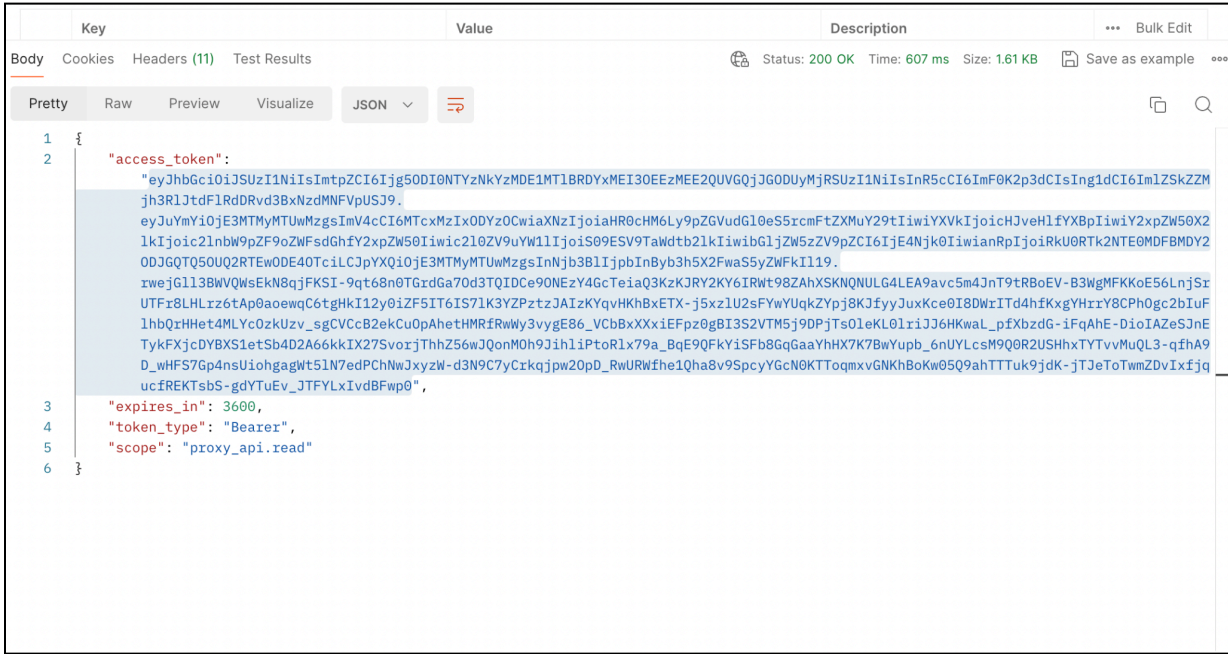

<https://identity.krames.com/connect/token>

This authorization request has the following parameters: (Replace client\_id and client\_secret values with the values provided to you).

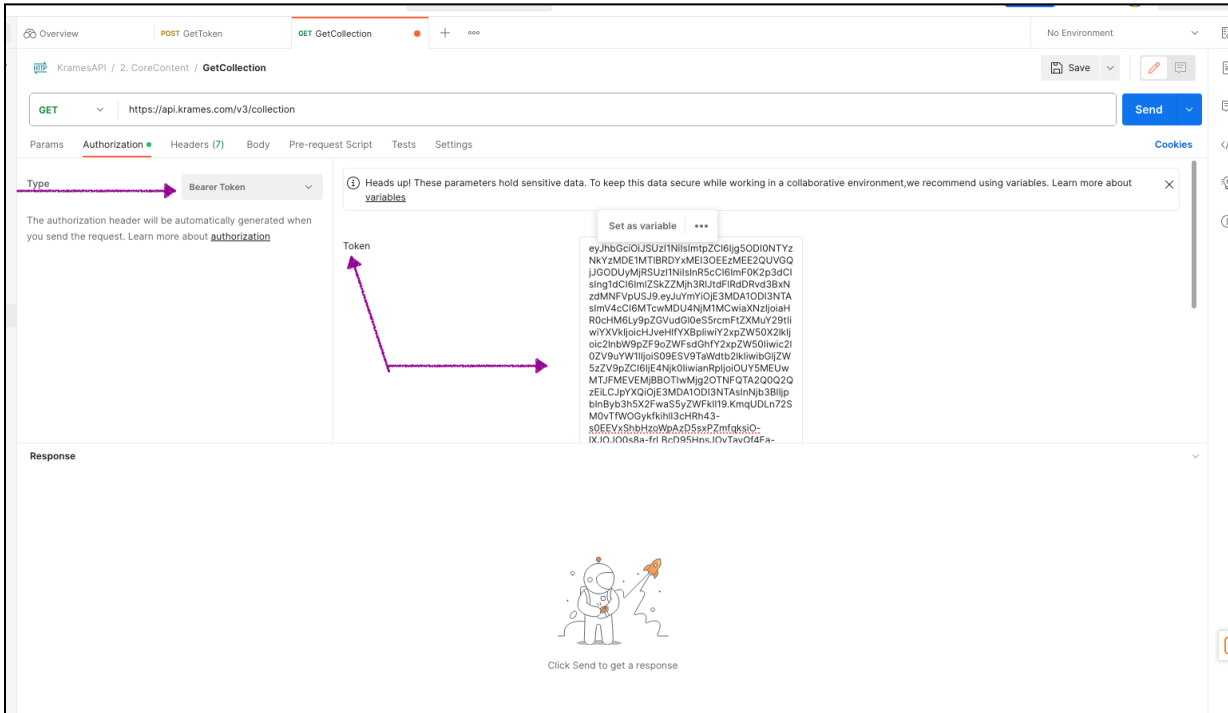

Key	Value	Description
client_id	[REDACTED]	
client_secret	[REDACTED]	
grant_type	client_credentials	
scope	proxy_api.read

The authorization request will respond with JSON similar to:

Unless explicitly stated, all API calls here require an OAuth Bearer Token. This token ties the request to a license unless it is a system-level token. The bearer token should be sent using the Authorization header, and prefixed with 'Bearer' or put in the Token section of POSTMAN or any other API platform.

## ListLicensedContentTypes

Returns a distinct list of Content Types assigned to the client's license.

[https://api.krames.com/{client\\_name}/Content.svc/ListLicensedContentTypes](https://api.krames.com/{client_name}/Content.svc/ListLicensedContentTypes)

**client\_name** - This is the username for the API credentials. If it doesn't work with the username, please reach out to the Ignite Education team.

The screenshot shows a REST client interface with the following details:

- Method: GET
- URL: `https://api.krames.com/{client_name}/Content.svc/ListLicensedContentTypes`
- Authorization: Bearer Token
- Token: `eyJhbGciOiJIUzI1NiIsInR5cCI6IkpzZW50L3VzZXQ6IjE6MTIzNDU2NzA5ODI0NTY...`
- Status: 200 OK
- Time: 2.37 s
- Size: 2.54 KB

The response body is XML:

```
1 <?xml version="1.0" encoding="utf-8" ?>
2 <ContentTypeList>
3   <ContentType Id="1" Name="Wellness Library" />
4   <ContentType Id="3" Name="Healthsheets" />
5   <ContentType Id="6" Name="Daily News Feed" />
6   <ContentType Id="19" Name="Nutritional Supplement Advisor" />
7   <ContentType Id="23" Name="About This Site" />
8   <ContentType Id="30" Name="Recipes" />
9   <ContentType Id="34" Name="Cancer Source" />
10  <ContentType Id="35" Name="Cancer FAQs" />
11  <ContentType Id="40" Name="Quizzes" />
12  <ContentType Id="41" Name="Calculators" />
13  <ContentType Id="42" Name="MRAs" />
14  <ContentType Id="43" Name="Prevention Planner" />
15  <ContentType Id="56" Name="Disease Management" />
```

## ListLicenseUpdates

Return a list of content that has been added to or deleted from a license, and licensed content that was updated, after a given date.

[https://api.krames.com/{client\\_name}/Content.svc/ListLicenseUpdates?xmlRequest=<LicenseUpdateRequest StartDate="2024-02-15" IncludeBlocked="false" />](https://api.krames.com/{client_name}/Content.svc/ListLicenseUpdates?xmlRequest=<LicenseUpdateRequest StartDate=)

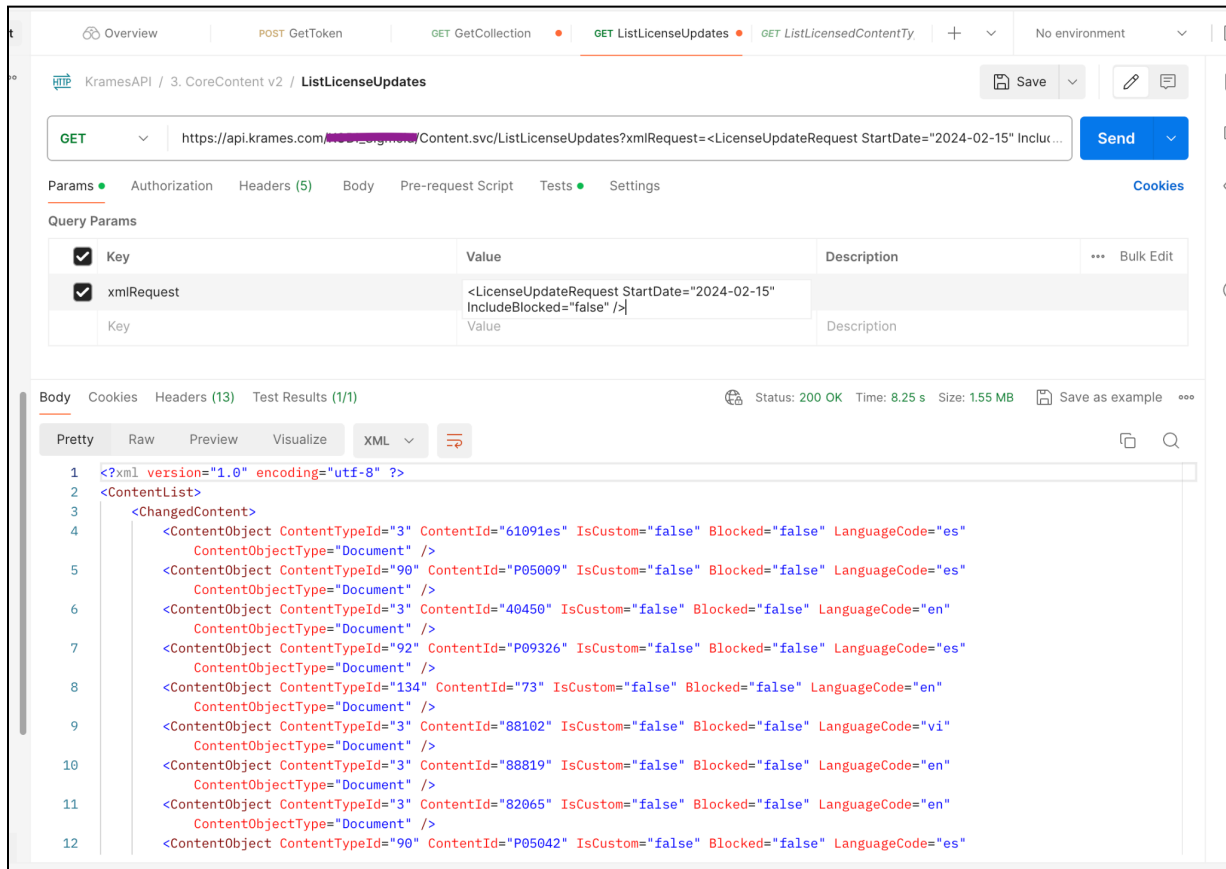

**client\_name** - This is the username for the API credentials. If it doesn't work with the username, please reach out to the Ignite Education team.

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

## Browse-based navigation

There are two categorization options when building browser-based navigation with Ignite Education content.

**Serviceline Hierarchy:** Servicelines are a type of metadata applied to content. It Defines the clinical service line and organizes resources into a browsable hierarchy.

- Contains up to 3 hierarchical levels. For example,
  - Adult
  - Adult\Asthma
  - Adult\Asthma\Asthma
  - Adult\Asthma\Asthma, Attack
  - Adult\Asthma\Asthma, Exercise
  - Pediatrics
  - Pediatrics\Adolescent Medicine
  - Pediatrics\Adolescent Medicine\Eating Disorders
  - Pediatrics\Adolescent Medicine\Growth And Development
  - Pediatrics\Adolescent Medicine\Safety,Firearms

**Collection Hierarchy:** Collections are groups of content that can be licensed for client use. It defines groupings of content resources based on some legacy WebMD Ignite content sources. This can also be used to mimic the structure of the consumer health library.

## ServiceLine Hierarchy

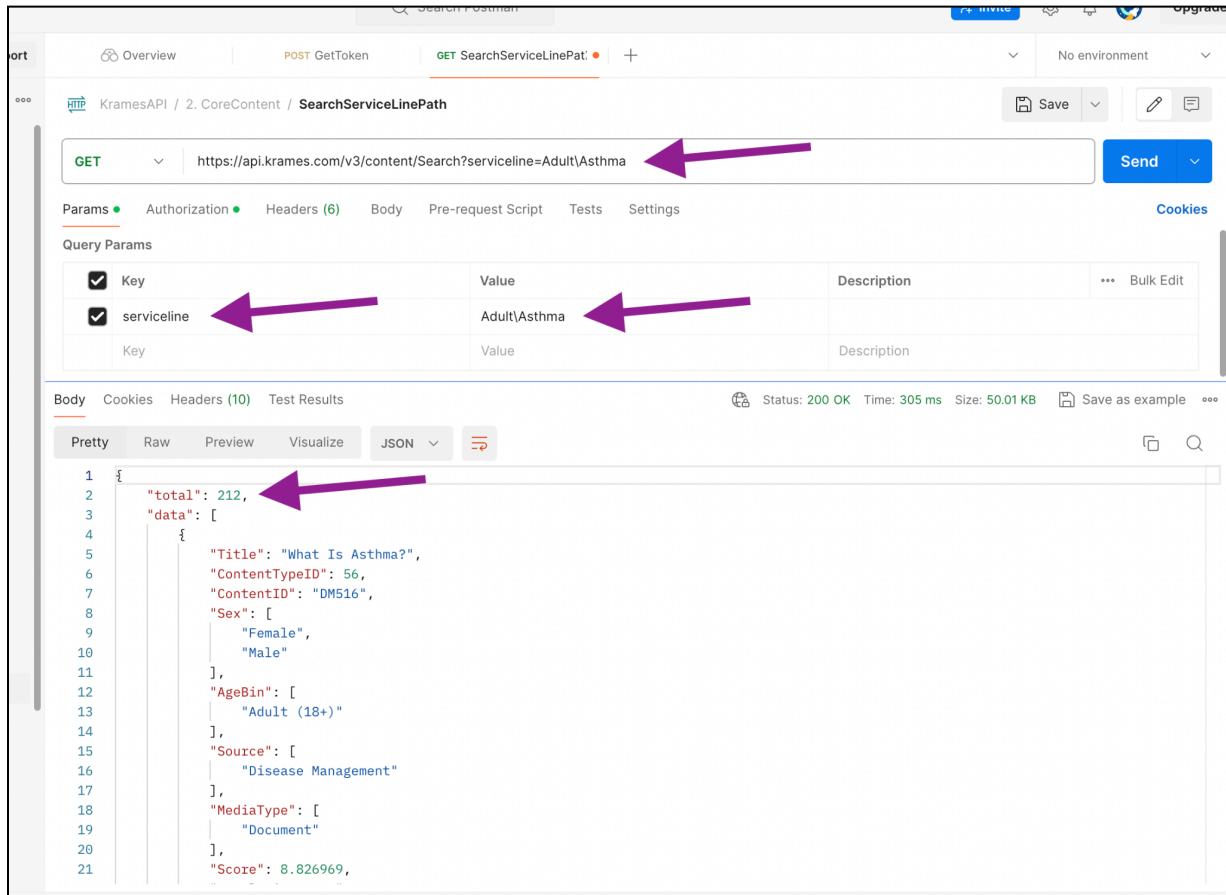

There is a single endpoint that can be used to retrieve the ServiceLine hierarchy from the API; this endpoint will return all 3 levels of the hierarchy in JSON format.

When utilizing this hierarchy information using the search endpoint to retrieve documents that belong to a particular node in the hierarchy, you should pass the path attribute of the node to the search using the `serviceline` parameter.

Example: To retrieve all the documents located in the `Adult\Asthma` node, I would pass that path to the search like this:

### ServiceLine Path

```
GET /v3/content/Search?serviceline=Adult\Adolescent%20Medicine
```

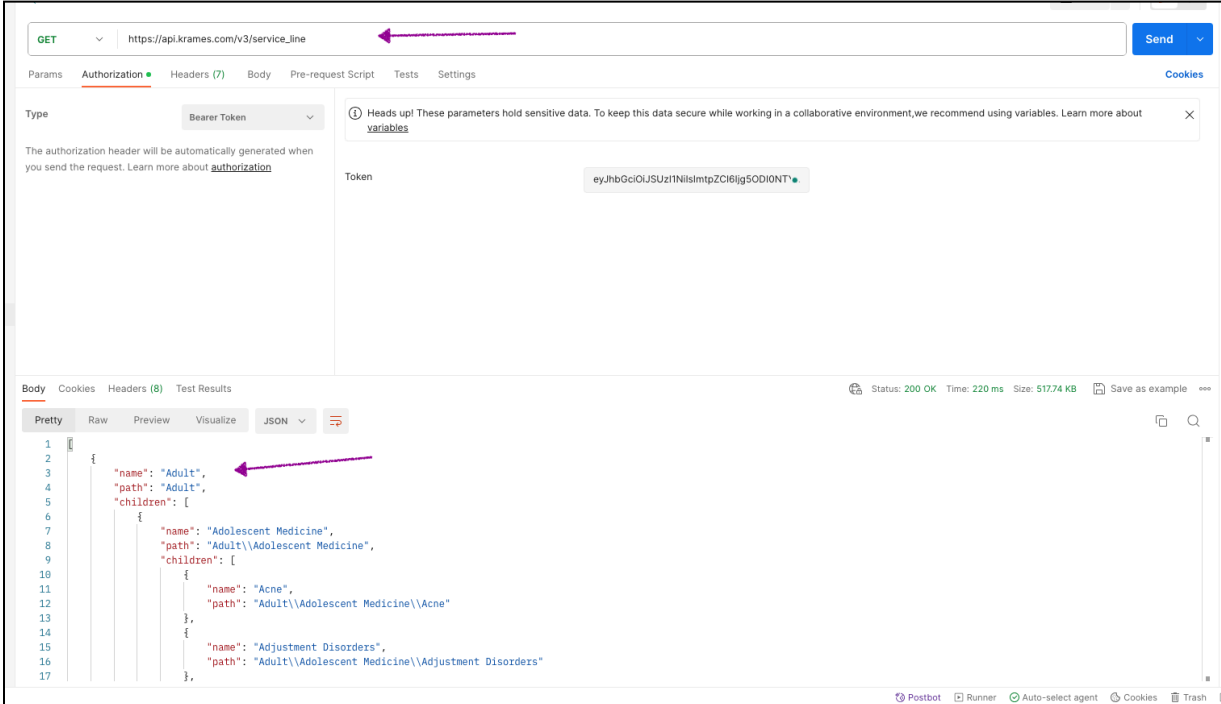

The screenshot shows a REST client interface with the following details:

- Request:** Method: GET, URL: `https://api.krames.com/v3/content/Search?serviceline=AdultAsthma`
- Params:** Query Params table with one entry: Key: `serviceline`, Value: `AdultAsthma`
- Response:** Status: 200 OK, Time: 305 ms, Size: 50.01 KB
- Response Body (JSON):**

```
1 {
2   "total": 212,
3   "data": [
4     {
5       "Title": "What Is Asthma?",
6       "ContentTypeID": 56,
7       "ContentID": "DM516",
8       "Sex": [
9         "Female",
10        "Male"
11      ],
12      "AgeBin": [
13        "Adult (18+)"
14      ],
15      "Source": [
16        "Disease Management"
17      ],
18      "MediaType": [
19        "Document"
20      ],
21      "Score": 8.826969,
```

**Serviceline:**  
[https://api.krames.com/v3/service\\_line](https://api.krames.com/v3/service_line)

The screenshot shows a REST client interface with the following details:

- Method: GET
- URL: [https://api.krames.com/v3/service\\_line](https://api.krames.com/v3/service_line)
- Authorization: Bearer Token
- Token: eyJhbGciOiJSUzI1NiIsImtpZCI6Ilg5ODI0NTI0In0=
- Status: 200 OK, Time: 220 ms, Size: 517.74 KB
- Response Body (JSON):

```
1 {
2   "name": "Adult",
3   "path": "Adult",
4   "children": [
5     {
6       "name": "Adolescent Medicine",
7       "path": "Adult\\Adolescent Medicine",
8       "children": [
9         {
10          "name": "Acne",
11          "path": "Adult\\Adolescent Medicine\\Acne"
12        },
13        {
14          "name": "Adjustment Disorders",
15          "path": "Adult\\Adolescent Medicine\\Adjustment Disorders"
16        }
17      ]
18     }
19   ]
20 }
```

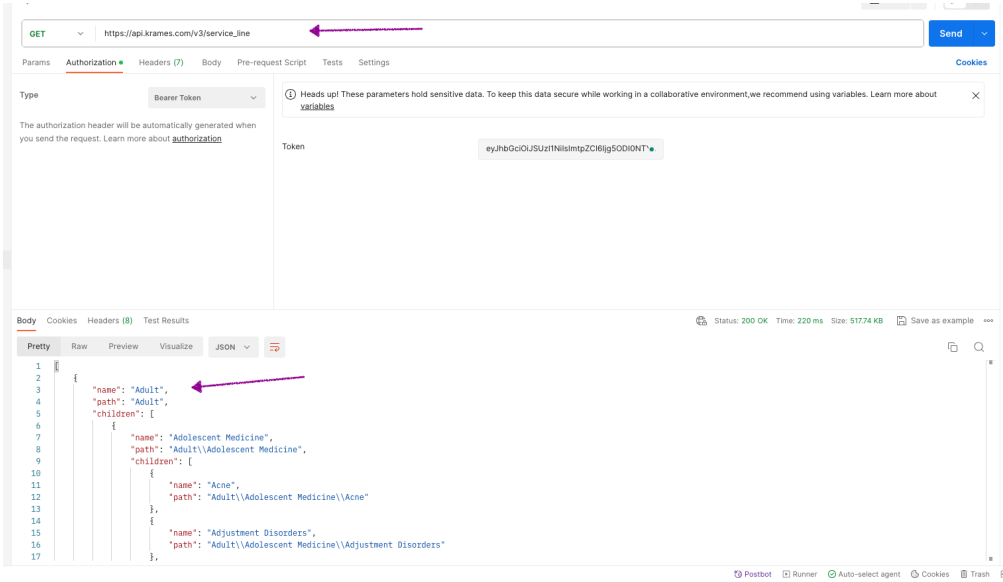

NOTE: Path values in JSON may need to be unescaped.

Please see the below screenshot for the API request to retrieve serviceline in JSON format

## Technical Specifications

<b>Resource – GET</b>	<a href="https://api.krames.com/v3/service_line">https://api.krames.com/v3/service_line</a>
<b>Description</b>	An API endpoint that returns the entire serviceline hierarchy in JSON format.
<b>POSTMAN – API Request</b>	
<b>Parameters</b>	This endpoint has no parameters.

ALL CONTENTS ARE CONFIDENTIAL

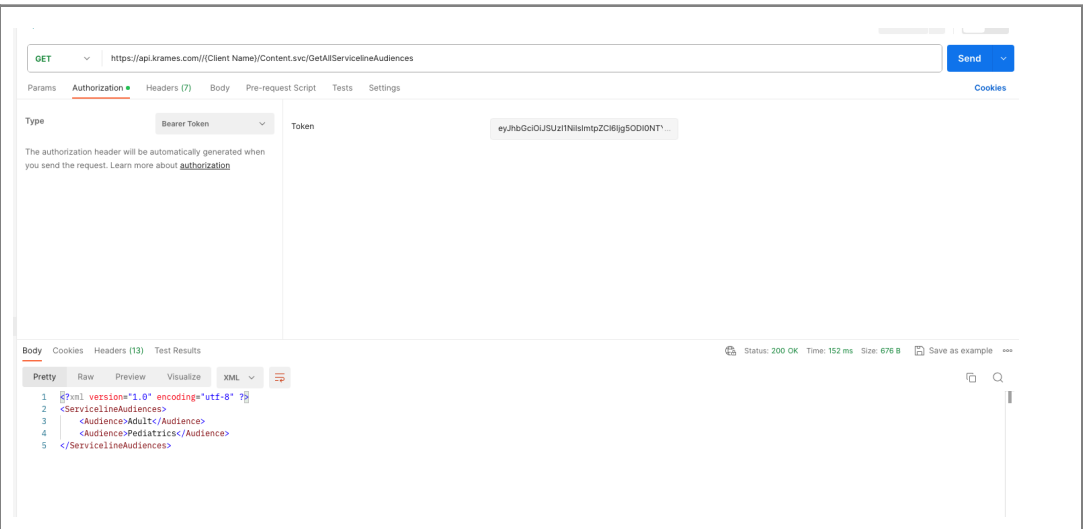

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.  
May not be reproduced or redistributed without the express permission of WebMD Ignite.

<b>Return Values</b>	<p>200 Success</p> <pre>[   {     "name": "Adult",     "path": "Adult",     "children": [       {         "name": "Adolescent Medicine",         "path": "Adult\\Adolescent Medicine",         "children": [           {             "name": "Acne",             "path": "Adult\\Adolescent Medicine\\Acne"           },           {             "name": "Adjustment Disorders",             "path": "Adult\\Adolescent Medicine\\Adjustment Disorders"           },           {             "name": "Adolescent Medicine",             "path": "Adult\\Adolescent Medicine\\Adolescent Medicine"           },           ...         ]       },       ...     ]   },   ... ]</pre>
----------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Resource – GET</b>	<a href="https://api.krames.com/{Client Name}/Content.svc/GetAllServicelineAudiences">https://api.krames.com/{Client Name}/Content.svc/GetAllServicelineAudiences</a>
<b>Description</b>	An API endpoint that returns the main folders under a serviceline in JSON format.

<b>POSTMAN - API Request</b>	
<b>Parameters</b>	This endpoint has no parameters.
<b>Return Values</b>	<pre> &lt;?xml version="1.0" encoding="utf-8" ?&gt; &lt;ServiceLineAudiences&gt;   &lt;Audience&gt;Adult&lt;/Audience&gt;   &lt;Audience&gt;Pediatrics&lt;/Audience&gt; &lt;/ServiceLineAudiences&gt; </pre>

## Collection Hierarchies

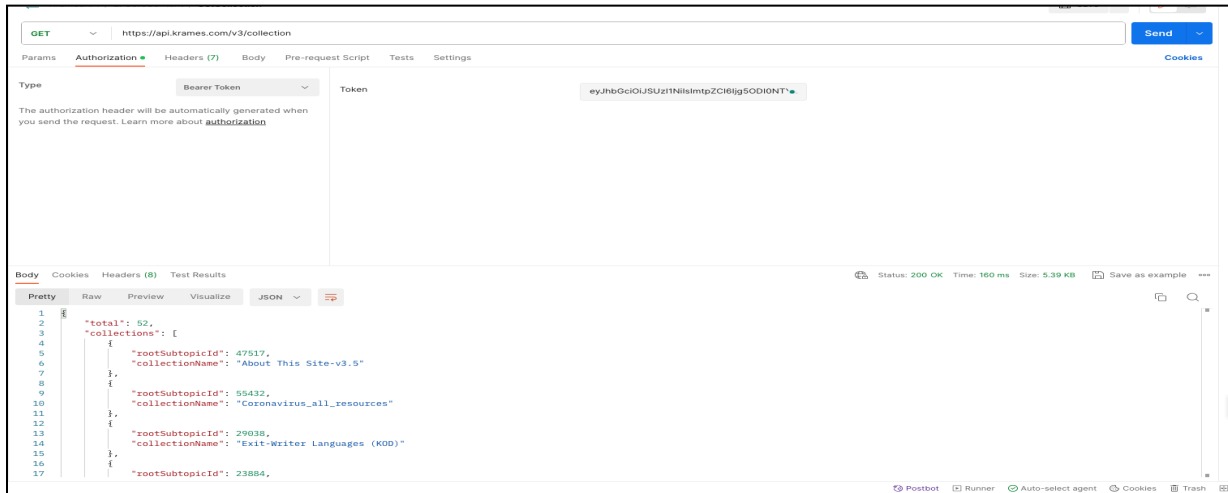

There are two endpoints that can be used to retrieve the Collection hierarchies from the API. One is for retrieving the top-level Collections in JSON format, and the second is for retrieving the details of that collection (full collection hierarchy) in JSON format.

Use the search endpoint to retrieve documents that belong to a particular node in the hierarchy, construct a path using the names of the nodes in the hierarchy path you want to retrieve documents for, and pass that path to the search using the `collectionPath` parameter.

There are two types of collection: Standard Collection and Dynamic Collection

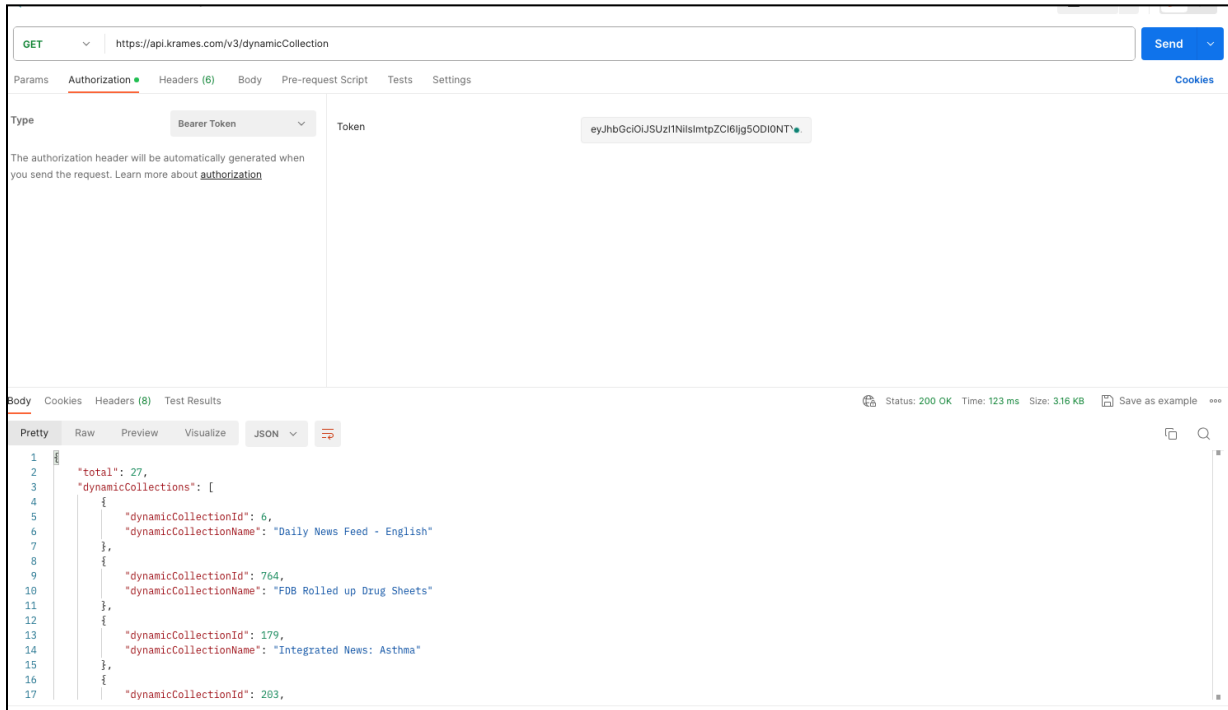

**Standard Collection:** Can contain multiple content types and are broken down into subtopics

**GET - <https://api.krames.com/v3/collection>**

**Dynamic Collection:** It contains only one type of content, like 138 for Videos, or 208 (203- old contentTypeID) for Drug Sheets, or 6 for HealthDay News. They are automatically updated when new content is added.

**GET - <https://api.krames.com/v3/dynamicCollection>**

Example: To retrieve all the documents/articles located in the Exit-WriterED\Diagnosis\Allergy node, use the following type of request:

**GET**

https://api.krames.com/v3/content/search?collectionPath=ExitWriterED\Diagnosis\Allergy

NOTE: Path values in JSON may need to be unescaped.

Please see the screenshot below for this API request.

<b>Resource</b>	GET - https://api.krames.com/v3/collection
<b>Description</b>	Retrieves the collections that are available in your license in JSON format.
<b>POSTMAN - API Call</b>	
<b>Parameters</b>	None
<b>Return Values</b>	<p>200 Success</p> <pre>{   "total": 58,   "collections": [     {       "rootSubtopicId": 47517,       "collectionName": "About This Site-v3.5"     },     {       "rootSubtopicId": 55432,       "collectionName": "Coronavirus_all_resources"     },     ...   ] }</pre>

## Search Content

### Two search options: Term and Aggregates

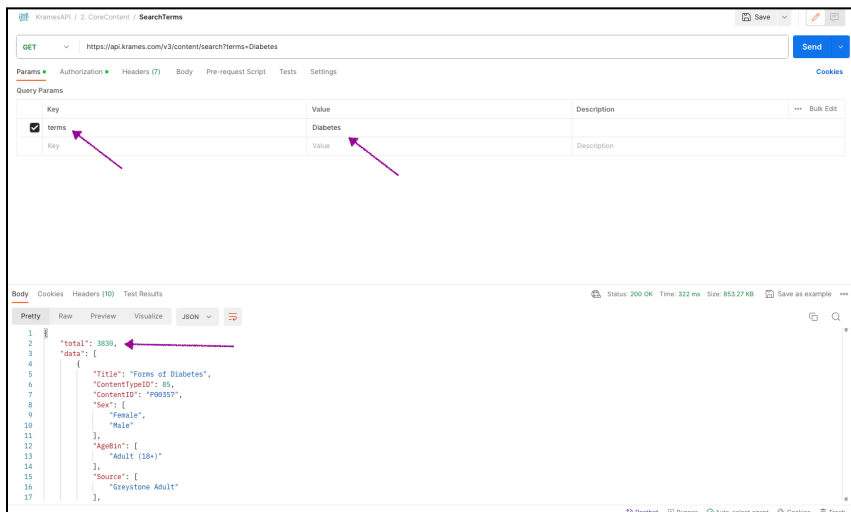

All Ignite Education content is tagged with metadata. The metadata is a list of key/value pairs. See the table above for the metadata associated with each content type.

### Term Search

Searching by terms uses a full-text search over text fields like Title, Body, and Keywords. The Term search uses stemming, partial word matching, and synonyms.

#### Terms Search Examples for Query Parameters:

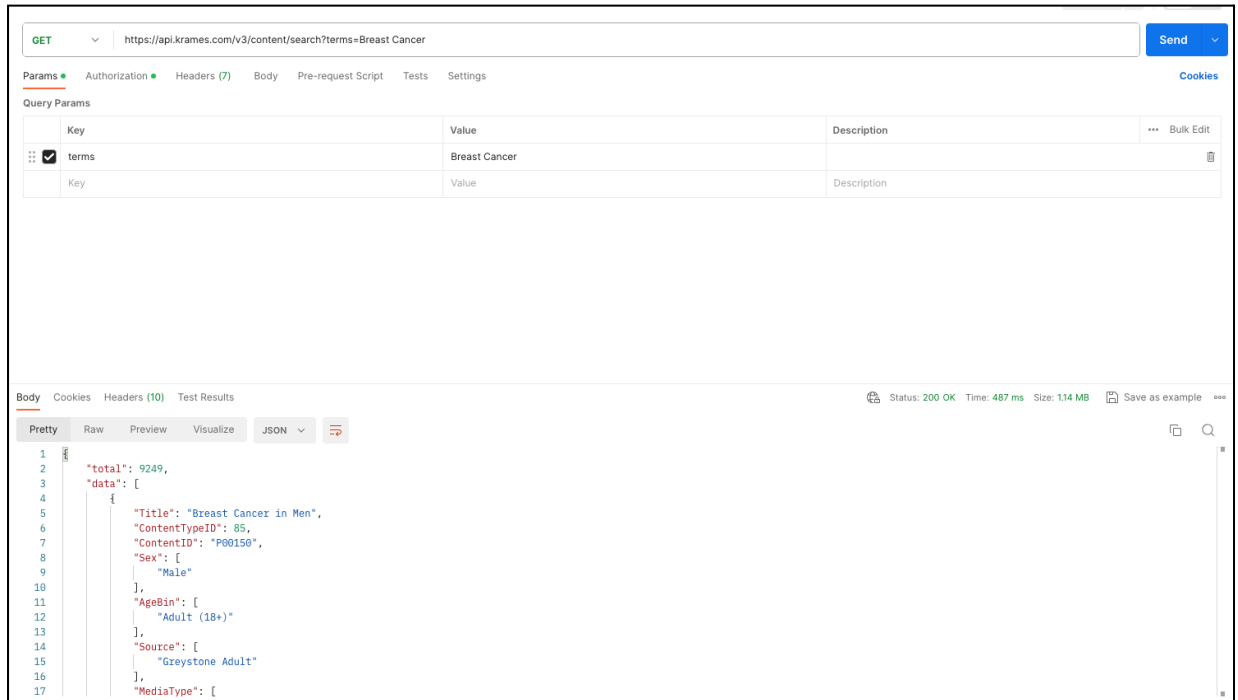

1. terms = Diabetes  
There are 1982 articles for this license that contain the term diabetes in the Title, body, and keywords.  
<https://api.krames.com/v3/content/search?terms=Diabetes>

2. terms = Breast Cancer  
There are 299 articles for this license which consist of the term Breast Cancer in Title, body and keywords.

Query Parameters:  
terms = Breast Cancer

<https://api.krames.com/v3/content/search?terms=Breast Cancer>

### 3. terms=Bladder Cancer

Query Parameters:

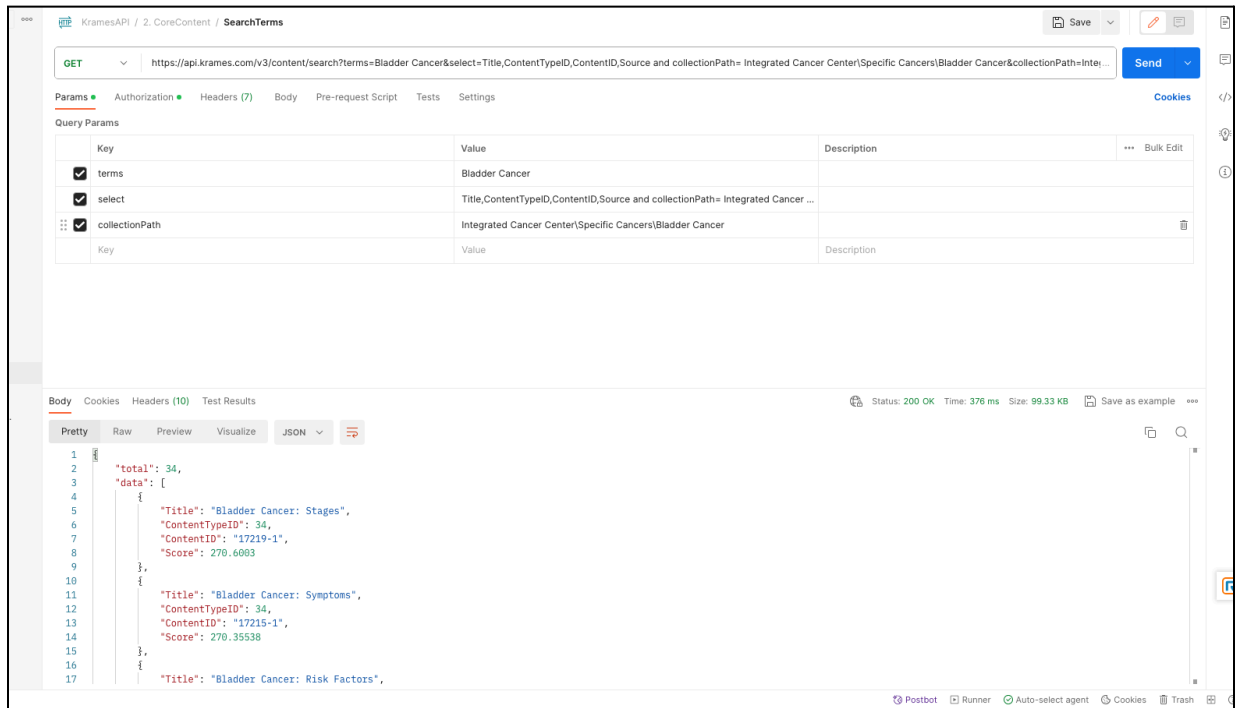

terms=Bladder Cancer

select = Title,ContentTypeID,ContentID,Source and collectionPath= Integrated Cancer Center\Specific Cancers\Bladder Cancer

collectionPath = Integrated Cancer Center\Specific Cancers\Bladder Cancer

There are 34 articles for this license which consist of the term Bladder Cancer and collectionPath= Integrated Cancer Center\Specific Cancers\Bladder Cancer in Title, body and keywords. This is more specific search to find articles under a collection folder

<https://api.krames.com/v3/content/search?terms=Bladder Cancer&select=Title,ContentTypeID,ContentID,Source and collectionPath= Integrated Cancer Center\Specific Cancers\Bladder Cancer&collectionPath=Integrated Cancer Center\Specific Cancers\Bladder Cancer>

4. terms = sore throat

Query Params:

terms = sore throat

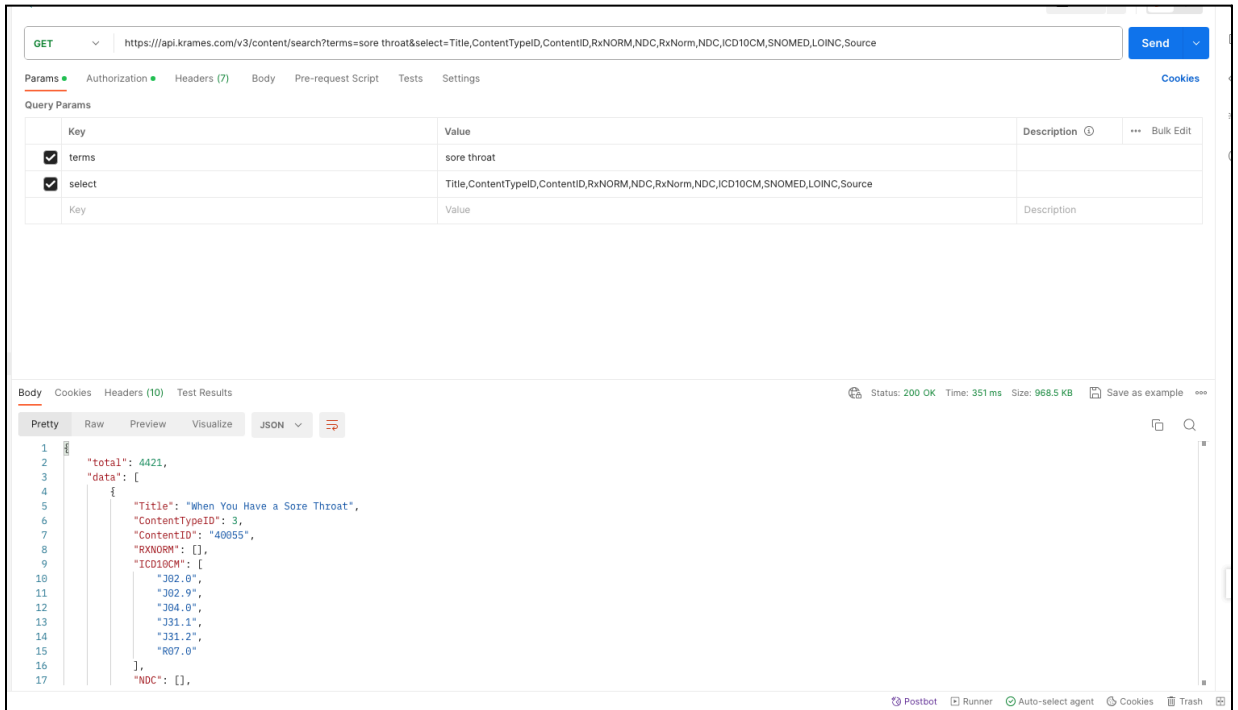

select =

Title,ContentTypeID,ContentID,RxNORM,NDC,RxNorm,NDC,ICD10CM,SNOMED,LOINC,Source

There are 334 articles for this license which consist of the term sore throat in Title, body, and keywords.

<https://api.krames.com/v3/content/search?terms=sore throat&select=Title,ContentTypeID,ContentID,RxNORM,NDC,RxNorm,NDC,ICD10CM,SNOMED,LOINC,Source>

There are 4421 articles related to Sore throat

GET https://api.krames.com/v3/content/search?terms=sore throat&select=Title,ContentTypeID,ContentID,RxNORM,NDC,RxNorm,NDC,ICD10CM,SNOMED,LOINC,Source

16        "R07.9"
17      ],

```

## Aggregate Filters

Aggregate filters are done using the aggregate buckets and values returned in the search results. These buckets and values are dynamic and will only include buckets and values that apply to the content contained in the current search results. Implementations of these filters should target buckets and values, not specific bucket names or specific values, as these will change with every search result.

Some examples of buckets:

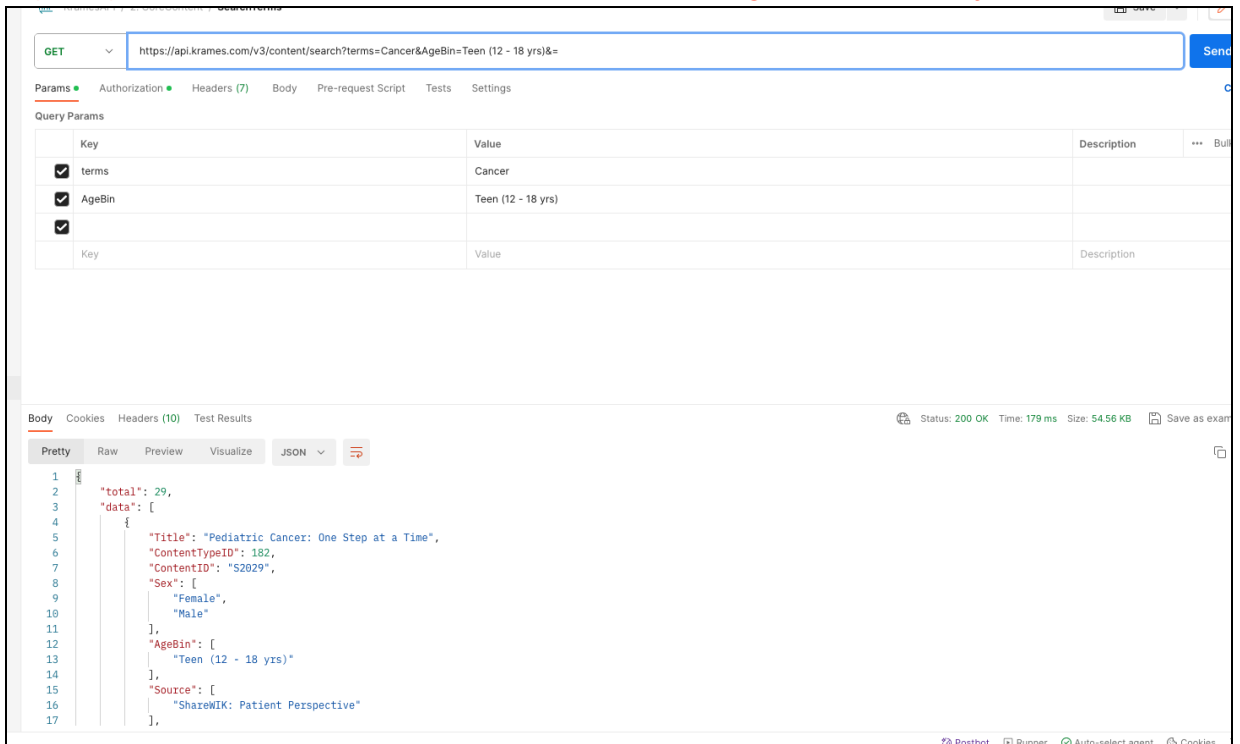

- AgeBin: [[Infant (0–11 mo), Child (11 mo – 12 yrs), Teen (12–18 yrs), Adult (18–64 yrs), Senior (65)], if no value is specified, all resources are returned.

Query Params:

Terms – Cancer

AgeBin – Teen (12 – 18 yrs)

[https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 - 18 yrs\)&=](https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen (12 - 18 yrs)&=)

The screenshot shows a REST client interface with the following details:

- Method:** GET
- URL:** `https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen (12 - 18 yrs)&=`
- Query Params:**

Key	Value	Description
terms	Cancer	
AgeBin	Teen (12 - 18 yrs)	
- Status:** 200 OK, Time: 179 ms, Size: 54.56 KB
- Response Body (JSON):**

```

1  {
2    "total": 29,
3    "data": [
4      {
5        "Title": "Pediatric Cancer: One Step at a Time",
6        "ContentTypeID": 182,
7        "ContentID": "S2029",
8        "Sex": [
9          "Female",
10         "Male"
11       ],
12       "AgeBin": [
13         "Teen (12 - 18 yrs)"
14       ],
15       "Source": [
16         "ShareWIK: Patient Perspective"
17       ],

```

- Sex: [Male, Female], if no value is specified, all resources are returned.

Query Params:

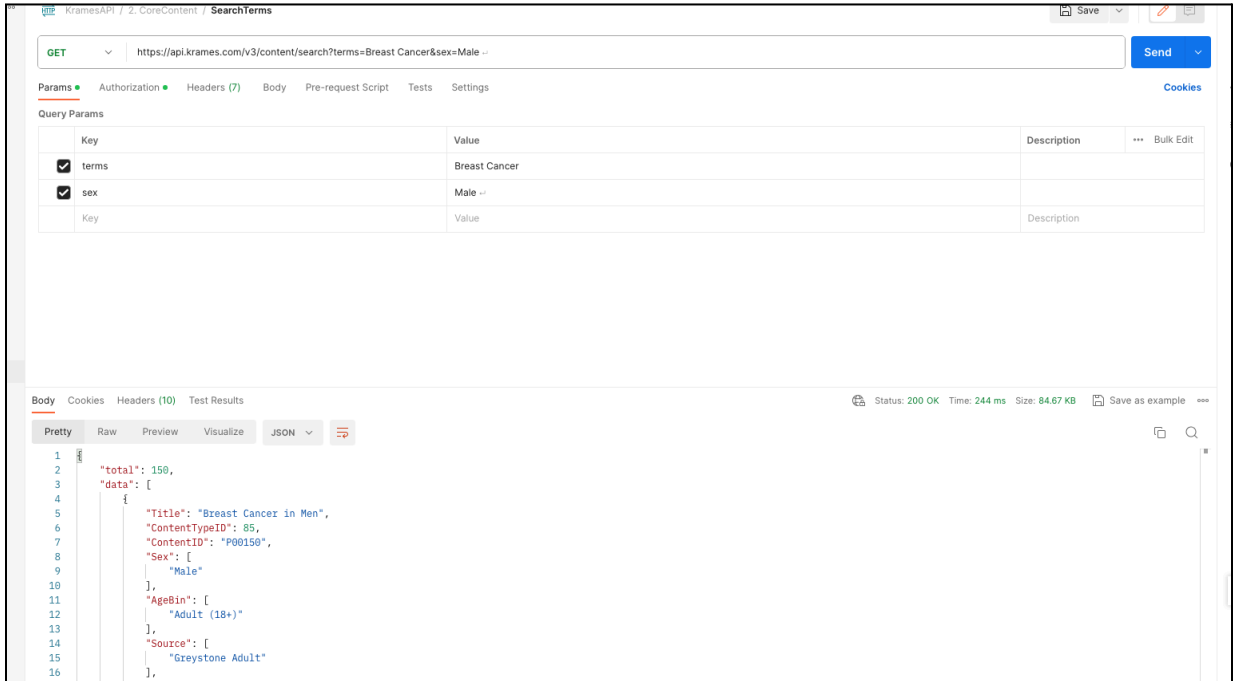

Terms – Breast Cancer,

aggregate filter (sex) – Male

<https://api.krames.com/v3/content/search?terms=Breast Cancer&sex=Male>

This API call will retrieve all the articles related to the search terms “Breast Cancer” and aggregate filter (Sex = Male)

The screenshot shows a REST client interface for a GET request to `https://api.krames.com/v3/content/search?terms=Breast Cancer&sex=Male`. The query parameters are `terms: Breast Cancer` and `sex: Male`. The response status is 200 OK, with a time of 244 ms and a size of 84.67 KB. The response body is shown in JSON format:

```

1  {
2    "total": 150,
3    "data": [
4      {
5        "Title": "Breast Cancer in Men",
6        "ContentTypeID": 85,
7        "ContentID": "P00150",
8        "Sex": [
9          "Male"
10       ],
11       "AgeBin": [
12         "Adult (18+)"
13       ],
14       "Source": [
15         "Greystone Adult"
16       ]
17     }
18   ]
19 }

```

- MediaType: [Document, Streaming Media]

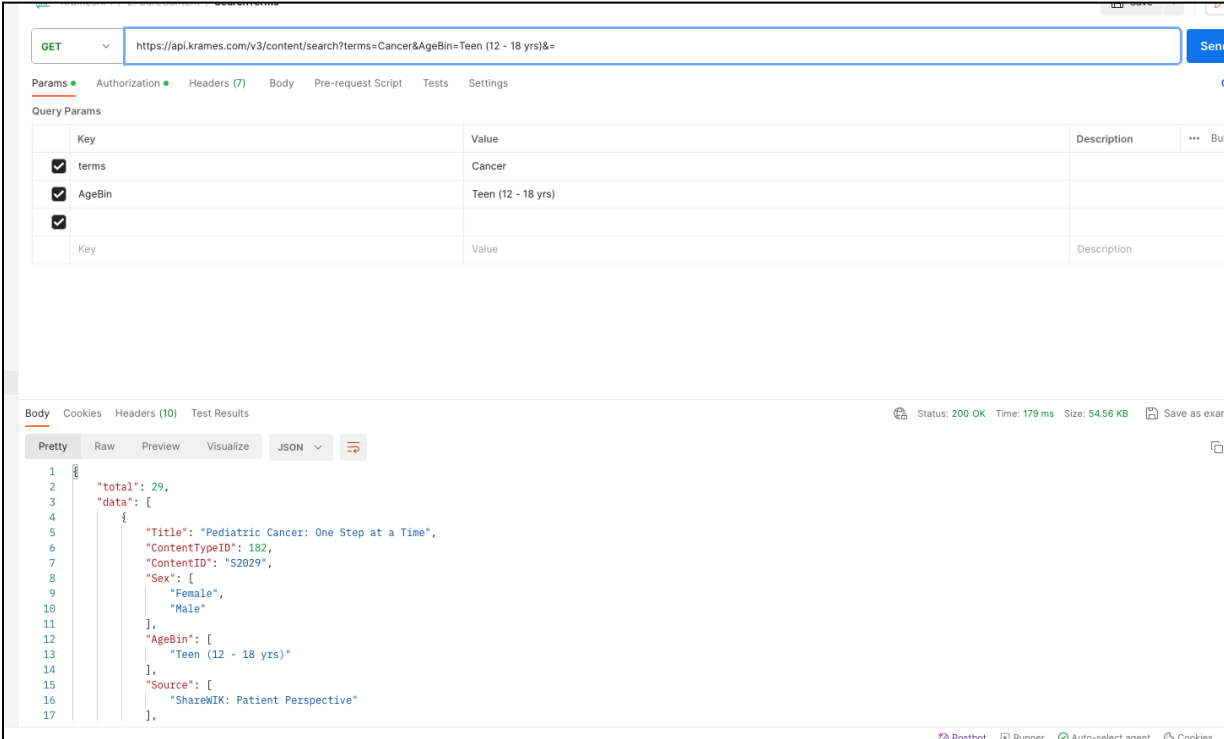

Query Params:

Terms – Cancer

AgeBin – Teen (12 - 18 yrs)

Mediatype– Video

[https://api.staging.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 - 18 yrs\)&mediatype=Video](https://api.staging.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen (12 - 18 yrs)&mediatype=Video)

The screenshot shows a REST client interface with a GET request to `https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen (12 - 18 yrs)&=&`. The response is a JSON object with the following structure:

```

1  {
2    "total": 29,
3    "data": [
4      {
5        "Title": "Pediatric Cancer: One Step at a Time",

## Code Filters

Filtering by code supports content retrieval using standard clinical lexicons such as ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, NDC and RxNORM. These codes are applied using query

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

string parameters, but are not present in the Aggregate Filters. To utilize these filters, the client must have knowledge of what code they intend to search on, as the search results do not contain this information.

### Query Params: SNOMED - 10633002

Query Params:

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> SNOMED	10633002	
<input checked="" type="checkbox"/> select	Title,ContentTypeID,ContentID,SNOMED	

```

1  {

7          "C56",
8          "C56.1",
9          "C56.2",
10         "C56.9",
11         "C79.6",
12         "C79.60",
13         "C79.61",
14         "C79.62",
15         "D39.1",
16         "D39.10",
17         "D39.11",
18         "D39.12"
19       ],
20         "MESH": [
21         "D010051"
22       ]
23     }
24   ]
25 }

```

### Pagination

By default, search results are returned in pages of 10, starting at the first page. To paginate through the content, the `limit` and `offset` parameters are available.

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.  
 May not be reproduced or redistributed without the express permission of WebMD Ignite.

Setting the `limit` parameter will change the page size, and setting the `offset` will change where you are in the results.

The search results include a `total` value that indicates the total number of records in the result set. Using this `total`, `limit`, and `offset`, full pagination of the search results is available.

There are 4 examples listed below on how to use limit parameters and one example with limit and offset.

1. No limit parameters.

This will pull the first 10 results in the search query for the terms=cancer

The screenshot shows a REST client interface for a GET request to `https://api.krames.com/v3/content/search?terms=cancer`. The response is a JSON object with the following structure:

```
1
2 {"total": 4870,
3  "data": [
4    {
5      "Title": "Anal Cancer: Stages",
6      "ContentTypeID": 34,
7      "ContentID": "18990-1",
8      "Sex": [
9        "Female",
10       "Male"
11     ],
12     "AgeBin": [
13       "Adult (18+)"
14     ],
15     "Source": [
16       "Cancer Source"
```

2. Limit parameters set to >10 and <100

The below API call will retrieve first limit-20 results for the search term = cancer.

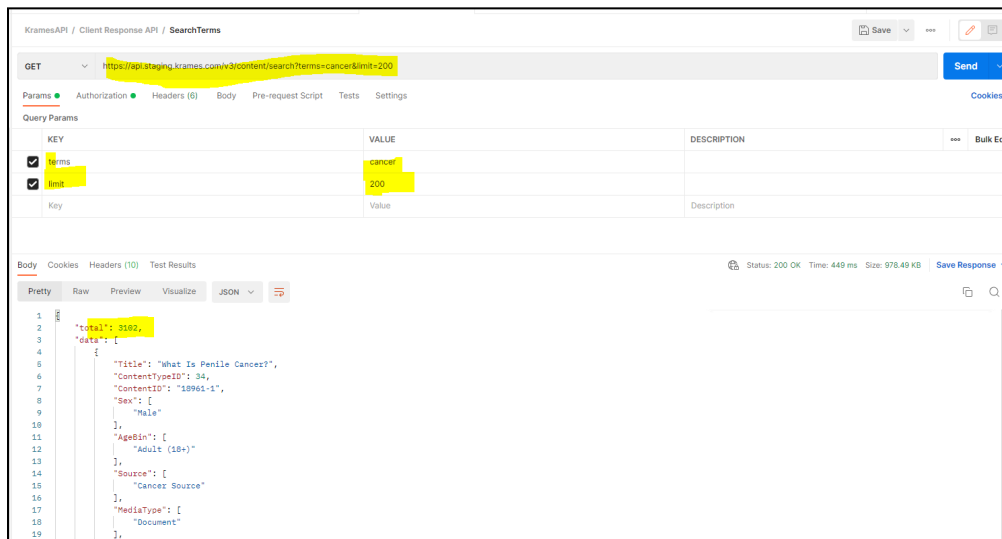

<https://api.krames.com/v3/content/search?terms=cancer&limit=20>

3. limit parameter set to >100

<https://api.krames.com/v3/content/search?terms=cancer&limit=200>

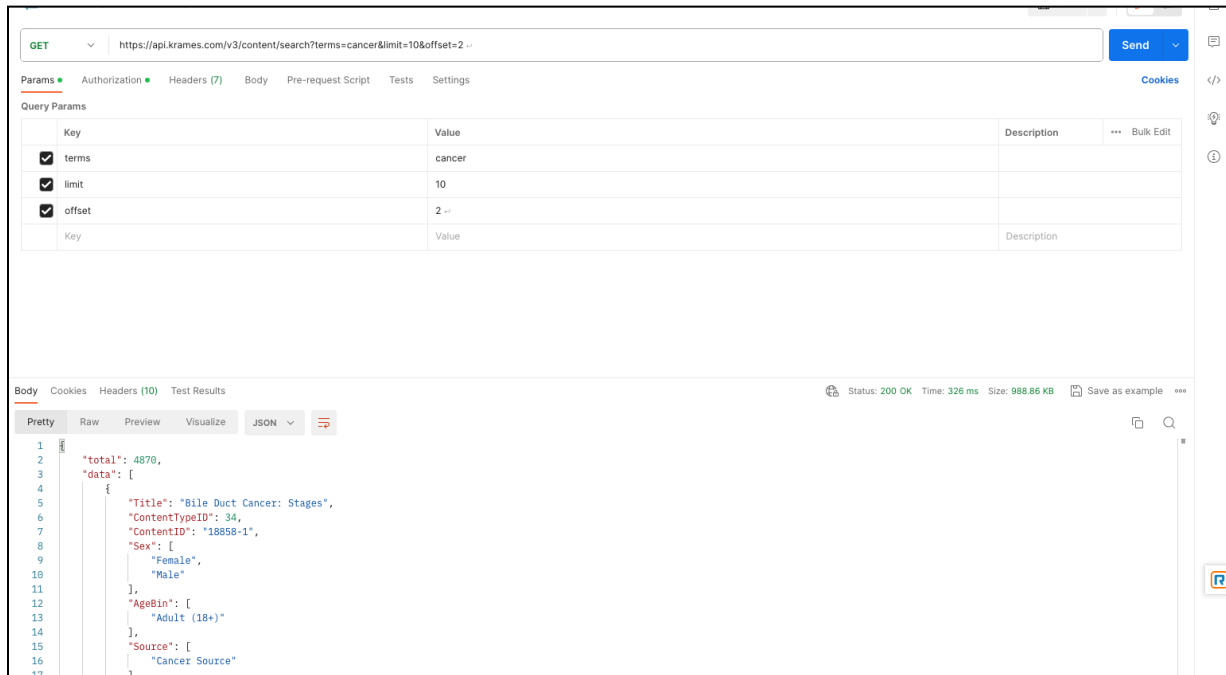

The maximum resultset in an API call will always be 100. The below API call will only first pull 100 titles with the term cancer even if the limit is set to 200.

4. limit parameter set to >10 and offset > 2

[https://api.krates.com/v3/content/search?terms=cancer&limit=10&offset=2](https://api.krames.com/v3/content/search?terms=cancer&limit=10&offset=2)

offset will change where you are in the resultset and will pull the first ten results from that location

## Selecting Fields

By default, the results contain the following fields:

1. Title
2. ContentTypeID
3. ContentID
4. Sex
5. AgeBin
6. Source
7. MediaType
8. Score (This is an internal field that represents the relevancy score)

The fields that are selected when a search is executed can be specified using the select parameter. `GET /v3/content/Search?select=Title,ContentTypeID,ContentID` would return only those 3 fields.

Available fields for selecting include:

- CollectionID
- RXNORM
- ICD10CM
- ICD10PCS
- NDC
- MediaType
- MESH
- SNOMED

ALL CONTENTS ARE CONFIDENTIAL

- HCPCS
- CPT
- LOINC
- ICD9
- Language
- Blurb
- Keywords

## Content & Terms blocking

The RESTful API now supports content & term blocking. This functionality prevents results to be displaced or that specific content from showing up in the response of the search endpoint. To enable this functionality, please reach out to the Ignite Education implementation team with the list of terms or content you want to be blocked from the search endpoint.

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

## Technical Specifications

<b>Resource</b>	GET /v3/content/Search
<b>Description</b>	The core search endpoint for searching content.
<b>Parameters</b>	<p>HTTP Headers:</p> <p>accepts-language the content language, default to en.</p> <p>QueryString Parameters (all optional):</p> <p>language: en //Overwrites any accepts-language header, defaults to 'en'</p> <p>terms: &lt;String&gt;</p> <p>rxnorm: [&lt;String&gt;, &lt;String&gt;]</p> <p>sex: [&lt;String&gt;, &lt;String&gt;]</p> <p>icd10pcs: [&lt;String&gt;, &lt;String&gt;]</p> <p>icd10cm: [&lt;String&gt;, &lt;String&gt;]</p> <p>snomed: [&lt;String&gt;, &lt;String&gt;]</p> <p>hcpcs: [&lt;String&gt;, &lt;String&gt;]</p> <p>ndc: [&lt;String&gt;, &lt;String&gt;]</p> <p>mesh: [&lt;String&gt;, &lt;String&gt;]</p> <p>loinc: [&lt;String&gt;, &lt;String&gt;]</p> <p>ageBin: [&lt;String&gt;, &lt;String&gt;]</p> <p>cptcode: [&lt;String&gt;, &lt;String&gt;]</p> <p>source: [&lt;String&gt;, &lt;String&gt;]</p> <p>mediatype: [&lt;String&gt;, &lt;String&gt;]</p> <p>select: [&lt;String&gt;, &lt;String&gt;]</p> <p>icd9code: [&lt;String&gt;, &lt;String&gt;]</p> <p>limit: &lt;Integer&gt; // Default: 10</p> <p>offset: &lt;Integer&gt; // Default: 0</p> <p>select: [&lt;String&gt;, &lt;String&gt;]</p>
<b>Return Values</b>	<p>200 Success</p> <pre>{   "total": 217,   "data": [     {       "title": &lt;String&gt;,       "contentType": &lt;Integer&gt;,       "contentId": &lt;String&gt;,       "aggregationName": [         &lt;String&gt;       ],       "score": 7.0069566     }   ],   "aggregations": [     {       "name": "Aggregation Name",       "aggregationValues": {         "abc": 209,         "xyz": 193       }     }   ] }</pre>

ALL CONTENTS ARE CONFIDENTIAL

## Use Cases

### Related Content

Related content can be obtained by using MeSH codes from either a Get Content request, or by selecting the MeSH codes in the search response, and executing a second search request using the MeSH code as a filter. The resulting search results would include documents related to the source content.

Example:

Perform a search:

GET /v3/content/Search?terms=diabetes

Select a document and retrieve:

GET /v3/content/123-1234

In the response from the get content call, we can see a MeSH code in the metadata of that response. We could display this document to a user, along with related documents, by executing a search using the MeSH code that was present in the document:

Get related content:

GET /v3/content/Search?MESH=98765

The results returned from this related content search can be displayed along with the contents of the document being displayed to inform the user of other content that is related to the document they are looking at.

## Type 2 Diabetes

### What is type 2 diabetes?

Type 2 diabetes is when your body can't make enough insulin, or use it well. Insulin helps your cells use sugar (glucose) for energy. Without insulin, glucose builds up in your blood. This leads to high blood sugar.

Type 2 diabetes is an ongoing (chronic) disease. It has no known cure. It's the most common type of diabetes.

### What causes type 2 diabetes?

The exact cause of type 2 diabetes is not known. It seems to run in families. But it often takes other factors to bring on the disease. These include:

- Being overweight
- Not getting enough physical activity
- Taking certain medicines

### Who is at risk for type 2 diabetes?

Risk factors include:

- **Age.** People ages 45 and older are at higher risk for diabetes.

## APPENDIX

Each content resource is identified by a Content Type ID (numeric code) and a Source which is the text description of the Content Type ID.

## Clinical Content

The table below provides detailed information on each content Source and Content Type ID included in a typical Clinical user license. The content included in a specific client’s license may be different. Only licensed content will be available through the API.

Note: The number of resources and languages will be continually updated with each content update. The information provided below is for illustrative purposes only.

Consult the *Quarterly Content Update documentation* for current content counts and language support.

Source	Standard Description	Content Type ID	Possible Metadata <i>Note: Assigned metadata depends on the topic</i>
<b>Health Sheets</b>	Patient Education documents that provide education on conditions, self-management and treatment options.	3	MeSH, ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, Serviceline, Age Bin, Sex, Keywords
<b>Exit-Writer Discharge Instructions</b>	Discharge documents that provide patients with about a common diagnosis or health concern with information on when to seek additional care.	82	MeSH, ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, Serviceline, Age Bin, Sex, Keywords
<b>Lab Tests</b>	Documents that help patients understand procedures and lab tests and range of results (normal, below and above normal ranges).	167	MeSH, ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, Serviceline, Age Bin, Sex, Keywords
<b>Greystone – Pediatric</b>	Patient Education focussed on conditions, treatment, and self-management options and the special needs of pediatric patients.	90	MeSH, ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, Serviceline, Age Bin, Sex, Keywords
<b>Drug Sheets – Rolled Up</b>	Documents that provide people with information about prescription drugs.	208	RxNORM, NDC
<b>Disease Management</b>	Selected resources only. Chronic condition resources.	56	MeSH, ICD-10-CM, ICD-10-PCS, SNOMED, CPT, LOINC, HCPCS, Serviceline, Age Bin, Sex, Keywords

<b>Client's Custom Content</b>	Customized documents specific to a client.	22	Determined by each client

## Consumer Resources

Clients may also license content from the Consumer Health Library. The table below provides detailed information on the Content Source and corresponding Content Type ID and possible metadata. The content listed below represents the content included for a typical consumer use case. The content included in a specific client’s license may be different. Only licensed content will be available through the API.

Content Type Name	Standard Description	Content Type ID	Possible Metadata <i>Note:Actual metadata depends on the topic</i>
Wellness Library	Education focussed on lifestyle and wellness topics.	1	MeSH, Serviceline, Keywords
ICM Health & Wellness	Consumer Education documents that provide education on conditions, self-management and treatment options.	197	MeSH, Serviceline, Keywords
Prevention Planner	Consumer Education documents that provide education on preventive services.	43	MeSH, Serviceline, Keywords
Greystone Adult <i>*Has Segments</i>	Consumer Education documents that provide education on conditions, self-management and treatment options.	85	MeSH, Serviceline, Keywords
Scc Diseases and Conditions <i>*Has Segments</i>	Consumer Education documents that provide education on conditions, self-management and treatment options.	134	MeSH, Serviceline, Keywords
Lab Tests	Documents that help patients understand procedures and lab tests and range of results.	167	MeSH, Serviceline, Keywords
Scc Tests and Procedures <i>*Has Segments</i>	Documents that help patients understand procedures and lab tests.	135	MeSH, Serviceline, Keywords
Greystone Tests and Procedures <i>*Has Segments</i>	Documents that help patients understand lab tests	92	MeSH, Serviceline, Keywords

## Languages

Ignite Education provides content in 3 language sets: basic, plus, and premium, depending on the content source. See the table below for the content type associated with a language. Note that some specific resources may be offered in additional languages.

Content Source	Standard Languages: (ISO639)		Optional Languages, depend on the specific resource	
Basic Language	EN ES	English Spanish		
Plus Language	ZH ZH-C N DE RU VI	Chinese Chinese Simplified German Portuguese Russian Vietnamese		
Premium Language	AR FR HT HI IT JO KO PL TGL	Arabic French Haitian-Creole Hindi Italian Japanese Korea Polish Tagalog		
<b>LabSheets</b>	en es	English Spanish		
<b>Drug Sheets</b>	en es	English Spanish		
<b>Ignite Education Clinical Videos</b>	en es	English Spanish		
<b>Step-by-step animation Videos</b> <i>(Ignite Education Clinical Video collection)</i>	en es	English Spanish		
Consumer Health Library	en	English		Selected titles are available in Spanish

## Segmented Content

Segmented content is available for the content sources below.

Please note: Not all articles in the Source below contain segments. The segments are not required. For example, “Call 911” may not be available for all conditions.

Source	Available Segments
Greystone Adult Greystone Pediatric Scc Diseases and Conditions	Overview Causes Symptoms Diagnosis Treatment Prevention Living With When to Call a Healthcare Provider Call 911 Key Points Next Steps
Greystone Tests and Procedures Scc Tests and Procedures Scc Tests and Procedures - Pediatric	Overview Purpose Risks Preparation During the Test After the Test Next Steps
