The WebMD Ignite Education Content V3 API is a RESTful API service that will support internal product design and delivery while also enabling clients and partners to access Ignite Education content to create dynamic and innovative consumer health engagement solutions.

**This documentation will be iterative as new services are added to the Ignite Education Content solution.**

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.  
May not be reproduced or redistributed without the express permission of WebMD Ignite.

## Ignite Education Content Basics

The API will only return the content resources associated with a client's license. Content is typically licensed by Source (HealthSheets, Ignite Education Clinical Videos, Exit-Writer Discharge Instructions, etc.).

Detailed tables in the Appendix provide detailed information about each content source, content type ID and associated metadata. One table provides information for a typical clinical license and use case; the second for a typical consumer license and use case. A third table provides detailed language codes by content (Appendix - page XX).

### Token and Endpoint URL

Below are the staging and production URLs for tokens and endpoints. The client should use the URL per the REST API staging or production credentials.

#### Token URL:

Production URL: <https://identity.krames.com/connect/token>

#### Endpoint URL

Production URL: <https://api.krames.com/>

### Content Variations

Each content resource has a variety of attributes. Some describe variants of a resource such as Version or Language. The Content ID does not change with these variants.

- Version (Same Content ID)
- Language (Same Content ID)

Content resources in different Media types (document or video) also have different Content IDs.

- Media (Different Content ID)

### Video content

Videos: The request for the streaming media format includes the URL to the video in the content delivery network (CDN) and the video transcript. The URL can be used in the video player of the client's choice.

Video HealthSheet: Clients can use the Video HealthSheet to print information for a consumer or patient. The consumer can then scan the QR code or use the short link to access the video. If a client licenses both Videos and Video HealthSheets, both resources can be accessed through the API.

### Example of API request where mediatype = video:

[https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 - 18 yrs\)&mediatype=Video](https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen%20(12%20-%2018%20yrs)&mediatype=Video)

The screenshot shows a POST request to [https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 - 18 yrs\)&mediatype=Video](https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen%20(12%20-%2018%20yrs)&mediatype=Video). The request body contains the following JSON:

```
1 {
2     "total": 3,
3     "data": [
4         {
5             "title": "Pediatric Cancer: One Step at a Time",
6             "ContentTypeID": 182,
7             "ContentID": "52029",
8             "Sex": "Both",
9             "Age": "Female",
10            "AgeInt": [
11                "Teen (12 - 18 yrs)"
12            ],
13            "Source": [
14                "ShareMD: Patient Perspective"
15            ]
16        }
17    ]
}
```

The response status is 200 OK, with a time of 135 ms and a size of 1.86 KB.

#### Example of QR code video within client app or website:

The screenshot shows a video player interface for a video titled "Addiction: The Bottom Is When You Stop Digging". The video summary is: "Daniel blew through rehab centers and police stations just like he did drugs. By the age of 18, he was almost out of options. This is his story...". Below the video player, there is a yellow button labeled "Scan the QR code" with the text "Using your mobile device, scan the following code:" followed by a QR code. There is also a blue button labeled "NBX".

#### Content Versioning

A version key will be generated and returned in the JSON response when retrieving content. By default, the current content version will be returned via the API, when no version is specified. Search results do not contain version information; the search index always contains the latest version of the content.

#### API Request to check the content version and API health:

<https://api.krames.com/health>

8 }
```

## Content Source

Ignite Education content is designed for two general use cases:

1. integration into a clinical application and workflow, and,
2. integration into a consumer-facing application.

Detailed tables in the Appendix provide an overview of the content resources available. Each content resource is identified by a Content Type ID (numeric code) and a Source which is the text description of the Content Type ID.

Note: The specific content sources available via the API is determined by a **client license**. If the content type is not included in the client license, it will not be returned through search or get content requests.

## Languages Supported

Language is a required attribute of any content item. All API endpoints utilize an HTTP `accepts-language` header, AND a querystring parameter for language, these will default to `en` if unspecified. The value of the query string parameter `language` will take precedence over the `accept-language` header.

This will pull all the English articles

Accept-Language – `en` or blank, this will retrieve all the English articles under the license.

115 "body": "<body><h1>Intolerancia alimentaria</h1><p>Una reacción de sensibilización a un alimento (intolerancia alimentaria) ocurre si usted come alimentos que su cuerpo no puede digerir bien. La intolerancia alimentaria suele confundirse con la alergia a los alimentos. A menudo, la intolerancia se debe a la falta de enzimas digestivas específicas que descomponen los alimentos. Sin embargo, puede haber otras razones por las que no tolera alimentos. No obstante, la intolerancia alimentaria no es una reacción alérgica es una respuesta del sistema inmunitario. En cambio, un ingrediente o sustancia del alimento provoca irritación en el sistema digestivo. </p><p>Los síntomas pueden comenzar dentro de algunas horas después de comer. Estos incluyen hinchazón, náuseas, vómitos, diarrea, cólicos/calambres en el estómago o muchos gases. Por lo general, este malestar termina en 6 a 24 horas. Se puede aliviar con tratamientos simples en el hogar. Los alimentos que, en general, causan esto incluyen: </p><ul><li>leche y productos lácteos (queso, yogur, crema agria), debido a la intolerancia a la lactosa (algunas personas que son intolerantes a la lactosa pueden tolerar el yogur y algunos quesos duros); </li><li>pepino y otros vegetales, como el pepino, calabacín y zanahoria; </li><li>frutas, como la manzana, la pera y la uva; </li><li>bebidas deportivas, refrescos sin cafeína, jugos, té y caldos. Retome de a poco su dieta habitual a medida que se sienta mejor. </p><ul><li>En el futuro, evite los alimentos que causaron la reacción hoy. Si no está seguro de cuál alimento la causó y quiere saberlo, elimine todo alimento que le genere sospecha. Llevar un diario de alimentos puede ayudarlo a describir de cuál se trata. Anada los alimentos sospechosos a su dieta en pequeñas cantidades, uno por uno, hasta que la reacción ocurra de nuevo. </p><ul><li>Seguimiento: <h2>Programe visitas de control con su proveedor de atención médica, o según las instrucciones, si no se siente mejor durante los próximos dos a tres días. </p><h3>Cuándo llamar al <strong>911</strong></h3><p>Llame al <strong>911</strong> si tiene alguno de los siguientes síntomas: </p><ul><li>dificultad para respirar; </li><li>confusión; </li><li>desmayo o pérdida del conocimiento; </li><li>vómitos persistentes (no puede mantener los líquidos en el estómago); </li><li>diarrea excesiva; </li><li>sangre o mucosidad en la diarrea; </li><li>debilidad o mareos.</p></ul></Section></body>",

119 }
```

Table 3 in the Appendix provides an overview of the content and the languages supported. Ignite Education uses the ISO 639-1 Code standards for language abbreviations, and ISO 639-2 for languages that are unavailable in ISO 639-1.

When using the GET content endpoint, this language parameter will be used to retrieve the document in the language the parameter specifies, if it is available. When calling the Search endpoint with a language parameter in this way, this will search Ignite Education content that is available in that language. So, any terms present in a search performed in this manner will need to also be in the same language that was specified.

## Segmented Content

Segments have been defined for a small set of content assets from the Consumer Health Library. Within this content type, standard segments have been defined and can be identified. See Table 4 in the Appendix for detailed information.

## Endpoint Base URL

The content endpoints described below should use this base URL:

Production URL: <https://api.krames.com/>

Requests to these endpoints require authorization. Authorization should be sent in a header with the key "Authorization", and the value should be "bearer <your token from the identity server>".

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

## Production environments

We recommend completing all development against the Ignite Education API in our production environment.

### Authentication

To retrieve a bearer token, an authorization request should be made to our identity server using:  
<https://identity.krames.com/connect/token>

This authorization request has the following parameters: (Replace client\_id and client\_secret values with the values provided to you).

The screenshot shows a Postman request to <https://identity.krames.com/connect/token>. The request method is POST. The body is set to form-data and contains the following parameters:

Key	Value	Description
client_id	[REDACTED]	
client_secret	[REDACTED]	
grant_type	client_credentials	
scope	proxy_api.read	

The response body is a JSON object:

```
1 "access_token": "eyJhbGciOiJSUzI1NiIsImtpZC16Ijg500I0NTYzNkYzMDE1MT1BRDYxMEI30EEzMEE2QUVGQjJGODUyMjRSUzI1NiIsInR5cCl6ImF0K2p3dCisIngIdCI6ImzSkZ2Mjh3R1Jtdf1RdDRvd3BxNzdMNfVpUSJ9.eyJvYm10I3MDA10D13NTAsInV4cCi6MTcmMDU4NjM1MCwiAXnZiJoiaHR0cHM6Ly9ZGVudGl0eS5rcmFtZXMuY29tIiwiYXVkiJoicH3veHlfxYBpiIwiy2xpZWBxO21kIjoiic2lnb9pZF9oZWFsdGhfY2xpZW50I1wiC210Z9uYw11Ijo1S9.9ESV9TAwdtb21kIwiib1g1Zw6zV9pZC16IjE4Njk0IxiwanRpIjoi0Uv5MEUwM7J3MEVENjb80TIwMjg20TNFQTA20q0202e11CjpxYX0iJ3MDA10D13NTAsInVjb3B1jpbiByb3h5X2FwaS5yZWfk1119. 5   "scope": "proxy_api.read"
6 }

```

Unless explicitly stated, all API calls here require an OAuth Bearer Token. This token ties the request to a license unless it is a system-level token. The bearer token should be sent using the Authorization header, and prefixed with 'Bearer' or put in the Token section of POSTMAN or any other API platform.

## ListLicensedContentTypes

Returns a distinct list of Content Types assigned to the client's license.

[https://api.krames.com/{client\\_name}/Content.svc/ListLicensedContentTypes](https://api.krames.com/{client_name}/Content.svc/ListLicensedContentTypes)

**client\_name** - This is the username for the API credentials. If it doesn't work with the username, please reach out to the Ignite Education team.

The screenshot shows a Postman collection named "KramesAPI / 3. CoreContent v2". The "ListLicensedContentTypes" endpoint is selected. The "Authorization" tab is active, showing a "Bearer Token" dropdown and a token value: eyJhbGciOiJSUzI1NiImltpZCI6Ijg5ODI0NTY...". The "Body" tab displays the XML response:

```
1 <?xml version="1.0" encoding="utf-8" ?>
2 <ContentTypeList>
3   <ContentType Id="1" Name="Wellness Library" />
4   <ContentType Id="3" Name="Healthsheets" />
5   <ContentType Id="6" Name="Daily News Feed" />
6   <ContentType Id="19" Name="Nutritional Supplement Advisor" />
7   <ContentType Id="23" Name="About This Site" />
8   <ContentType Id="30" Name="Recipes" />
9   <ContentType Id="34" Name="Cancer Source" />
10  <ContentType Id="35" Name="Cancer FAQs" />
11  <ContentType Id="40" Name="Quizzes" />
12  <ContentType Id="41" Name="Calculators" />
13  <ContentType Id="42" Name="MRAs" />
14  <ContentType Id="43" Name="Prevention Planner" />
15  <ContentType Id="56" Name="Disease Management" />
```

## ListLicenseUpdates

Return a list of content that has been added to or deleted from a license, and licensed content that was updated, after a given date.

[https://api.krames.com/{client\\_name}/Content.svc/ListLicenseUpdates?xmlRequest=<LicenseUpdateRequest StartDate='2024-02-15' IncludeBlocked='false' />](https://api.krames.com/{client_name}/Content.svc/ListLicenseUpdates?xmlRequest=<LicenseUpdateRequest StartDate='2024-02-15' IncludeBlocked='false' />)

**client\_name** - This is the username for the API credentials. If it doesn't work with the username, please reach out to the Ignite Education team.

The screenshot shows the Postman interface with the following details:

- Overview**: Shows various API endpoints like GetToken, GetCollection, ListLicenseUpdates, and ListLicensedContentTy.
- Request URL**: https://api.krames.com/3.0/CoreContent/v2/Content.svc/ListLicenseUpdates?xmlRequest=<LicenseUpdateRequest StartDate="2024-02-15" Includ...
- Method**: GET
- Headers**: Authorization (not shown), Headers (5) (not shown), Body (not shown), Pre-request Script (not shown), Tests (not shown), Settings (not shown).
- Query Params**: xmlRequest (checked) with value: <LicenseUpdateRequest StartDate="2024-02-15" IncludeBlocked="false"/>
- Body**: XML response (Pretty, Raw, Preview, Visualize, XML) showing a list of ContentObjects:

```
<?xml version="1.0" encoding="utf-8" ?>

## Browse-based navigation

There are two categorization options when building browser-based navigation with Ignite Education content.

**Serviceline Hierarchy:** Servicelines are a type of metadata applied to content. It Defines the clinical service line and organizes resources into a browsable hierarchy.

- Contains up to 3 hierarchical levels. For example,
  - Adult
  - Adult\Asthma
  - Adult\Asthma\Asthma
  - Adult\Asthma\Asthma, Attack
  - Adult\Asthma\Asthma, Exercise
  - Pediatrics
  - Pediatrics\Adolescent Medicine
  - Pediatrics\Adolescent Medicine\Eating Disorders
  - Pediatrics\Adolescent Medicine\Growth And Development
  - Pediatrics\Adolescent Medicine\Safety, Firearms

ALL CONTENTS ARE CONFIDENTIAL

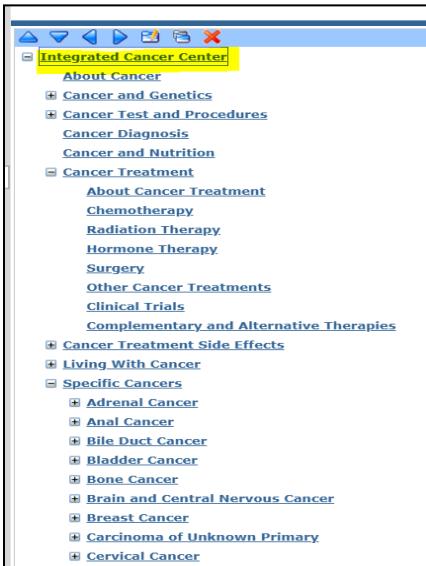

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

**Collection Hierarchy:** Collections are groups of content that can be licensed for client use. It defines groupings of content resources based on some legacy WebMD Ignite content sources. This can also be used to mimic the structure of the consumer health library.

## Serviceline Hierarchy

There is a single endpoint that can be used to retrieve the Serviceline hierarchy from the API; this endpoint will return all 3 levels of the hierarchy in JSON format.

When utilizing this hierarchy information using the search endpoint to retrieve documents that belong to a particular node in the hierarchy, you should pass the path attribute of the node to the search using the `serviceline` parameter.

Example: To retrieve all the documents located in the `Adult\Asthma` node, I would pass that path to the search like this:

### Serviceline Path

```
GET /v3/content/Search?serviceline=Adult\Adolescent%20Medicine
```

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

The screenshot shows a Postman collection named "SearchServiceLinePath". The "GET" request URL is <https://api.krames.com/v3/content/Search?serviceline=Adult\Asthma>. The "serviceline" parameter is highlighted with a purple arrow. The response body is a JSON object:

```
1 {  
2   "total": 212,  
3   "data": [  
4     {  
5       "Title": "What Is Asthma?",  
6       "ContentTypeID": 56,  
7       "ContentID": "DM516",  
8       "Sex": [  
9         "Female",  
10        "Male"  
11      ],  
12      "AgeBin": [  
13        "Adult (18+)"  
14      ],  
15      "Source": [  
16        "Disease Management"  
17      ],  
18      "MediaType": [  
19        "Document"  
20      ],  
21      "Score": 8.826969,  
22    }  
23  ]  
24}
```

May not be reproduced or redistributed without the express permission of WebMD Ignite.

POSTMAN - API Request	
Parameters	This endpoint has no parameters.
Return Values	<pre>&lt;?xml version="1.0" encoding="utf-8" ?&gt; &lt;ServicelineAudiences&gt;   &lt;Audience&gt;Adult&lt;/Audience&gt;   &lt;Audience&gt;Pediatrics&lt;/Audience&gt; &lt;/ServicelineAudiences&gt;</pre>

## Collection Hierarchies

There are two endpoints that can be used to retrieve the Collection hierarchies from the API. One is for retrieving the top-level Collections in JSON format, and the second is for retrieving the details of that collection (full collection hierarchy) in JSON format.

Use the search endpoint to retrieve documents that belong to a particular node in the hierarchy, construct a path using the names of the nodes in the hierarchy path you want to retrieve documents for, and pass that path to the search using the `collectionPath` parameter.

There are two types of collection: Standard Collection and Dynamic Collection

**Standard Collection:** Can contain multiple content types and are broken down into subtopics

**GET - <https://api.krames.com/v3/collection>**

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

Screenshot of Postman API client showing a successful GET request to <https://api.krames.com/v3/collection>. The response status is 200 OK, time is 160 ms, size is 5.39 KB. The response body is a JSON object with a "total" field of 62 and a "collections" array containing 62 items, each with a "rootSubtopicId" and a "collectionName".

```

1   {
2     "total": 62,
3     "collections": [
4       {
5         "rootSubtopicId": 47517,
6         "collectionName": "About This Site-v3.5"
7       },
8       {
9         "rootSubtopicId": 55432,
10        "collectionName": "Coronavirus_all_resources"
11      },
12      {
13        "rootSubtopicId": 29038,
14        "collectionName": "Exit-Writer Languages (KOD)"
15      },
16      {
17        "rootSubtopicId": 23884,
18      }
19    ]
20  }
  
```

**Dynamic Collection:** It contains only one type of content, like 138 for Videos, or 203 - contentTypeID for ASHP Drug Sheets, or 6 for HealthDay News. They are automatically updated when new content is added.

[GET - https://api.krames.com/v3/dynamicCollection](https://api.krames.com/v3/dynamicCollection)

Screenshot of Postman API client showing a successful GET request to <https://api.krames.com/v3/dynamicCollection>. The response status is 200 OK, time is 123 ms, size is 3.16 KB. The response body is a JSON object with a "total" field of 27 and a "dynamicCollections" array containing 27 items, each with a "dynamicCollectionId" and a "dynamicCollectionName".

```

1   {
2     "total": 27,
3     "dynamicCollections": [
4       {
5         "dynamicCollectionId": 6,
6         "dynamicCollectionName": "Daily News Feed - English"
7       },
8       {
9         "dynamicCollectionId": 764,
10        "dynamicCollectionName": "FDB Rolled up Drug Sheets"
11      },
12      {
13        "dynamicCollectionId": 179,
14        "dynamicCollectionName": "Integrated News: Asthma"
15      },
16      {
17        "dynamicCollectionId": 263,
18      }
19    ]
20  }
  
```

106   },
107   "body": "<body><h1>Food Sensitivity</h1><p>A food sensitivity reaction (food intolerance) occurs if you eat foods that your body can't digest properly. Food intolerance is often confused with a food allergy. Intolerance is often from a lack of specific digestive enzymes that break down food. But, there can be other reasons that you might not tolerate a food. Food sensitivity is not an allergic reaction. An allergic reaction is an immune system response. Instead, an ingredient or substance in the food causes an irritation of the digestive system. </p><p>Symptoms may start within a few hours after eating. Symptoms include bloating, nausea, vomiting, diarrhea, stomach cramps, or excess gas. This illness usually goes away within 6 to 24 hours. If symptoms continue, see a doctor. Foods that may cause food intolerance include dairy products (such as milk, cheese, and yogurt), wheat, eggs, soy, shellfish, and seafood. Some people who are lactose intolerant may be able to tolerate yogurt and some hard cheeses. </p><ul><li>ppRS, a common additive in Chinese cooking</li><li>ppPas, broccoli, and mushrooms</li><li>ppWheat, rye, and barley, because of gluten intolerance</li><li>Section</li><li>Home care </li><li>The following will help you care for yourself at home: </li><li>ppDon't use tobacco or alcohol. These can make symptoms worse.</li><li>ppStart with a clear liquid diet, taking small amounts often. Avoid dehydration by drinking 6 to 8 glasses of fluid per day. This can include water, sport drinks, soft drinks without caffeine, juices, tea, and soup. Gradually resume a normal diet as you start to feel better. </li><li>ppIn the future, don't eat the foods that caused your reaction. If you are not sure what caused it and you want to find out, cut out all suspected foods. Keeping a food diary may help you figure this out. Add suspected foods back into your diet in small amounts, one at a time, until you have another reaction. </li><li>Section</li><li>Follow-up care </li><li>Follow up with your healthcare provider as advised if you are not getting better over the next 2 to 3 days. </li><li>Section</li><li>Hotfield hotfieldid="116092_1">911</hotfieldid><li>Section</li><li>Follow up care </li><li>Follow up with your healthcare provider as advised if you have any of these: </li><li>ppHard time breathing</li><li>ppConfusion</li><li>ppDrowsiness or trouble awakening</li><li>ppFainting or loss of consciousness</li><li>ppRapid heart rate</li>

## Search Content

### Two search options: Term and Aggregates

All Ignite Education content is tagged with metadata. The metadata is a list of key/value pairs. See the table above for the metadata associated with each content type.

#### Term Search

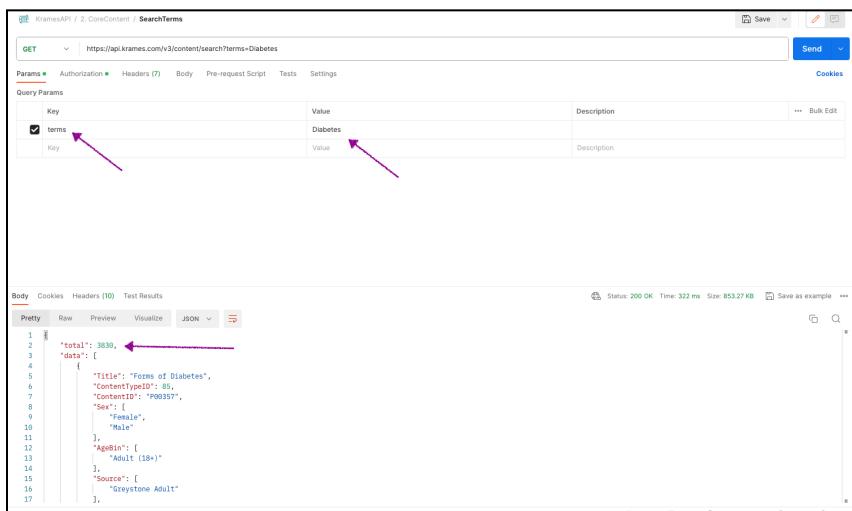

Searching by terms uses a full-text search over text fields like Title, Body, and Keywords. The Term search uses stemming, partial word matching, and synonyms.

#### Terms Search Examples for Query Parameters:

1. terms = Diabetes

There are 1982 articles for this license that contain the term diabetes in the Title, body, and keywords.

<https://api.krames.com/v3/content/search?terms=Diabetes>

```

{
  "total": 3882,
  "data": [
    {
      "Title": "Form of Diabetes",
      "ContentTypeID": 85,
      "ContentID": "P00337",
      "Sex": [
        "Male",
        "Male"
      ],
      "AgeGroup": [
        "Adult (18+)"
      ],
      "Source": [
        "Graystone Adult"
      ]
    }
  ]
}
  
```

2. terms = Breast Cancer

There are 299 articles for this license which consist of the term Breast Cancer in Title, body and keywords.

Query Parameters:

terms = Breast Cancer

<https://api.krames.com/v3/content/search?terms=Breast%20Cancer>

The screenshot shows a Postman API client interface. At the top, a GET request is made to [https://api.krames.com/v3/content/search?terms=Breast Cancer](https://api.krames.com/v3/content/search?terms=Breast%20Cancer). The 'Params' tab is selected, showing a single parameter 'terms' with the value 'Breast Cancer'. Below the request, the response is displayed in JSON format. The JSON output includes a 'total' count of 9249 and a 'data' array containing various article details such as Title, ContentTypeID, ContentID, Source, Sex, AgeBin, and Source.

## Aggregate Filters

Aggregate filters are done using the aggregate buckets and values returned in the search results. These buckets and values are dynamic and will only include buckets and values that apply to the content contained in the current search results. Implementations of these filters should target buckets and values, not specific bucket names or specific values, as these will change with every search result.

Some examples of buckets:

- AgeBin: [[Infant (0–11 mo), Child (11 mo – 12 yrs), Teen (12–18 yrs), Adult (18–64 yrs), Senior (65)], if no value is specified, all resources are returned.

Query Params:

Terms – Cancer

AgeBin – Teen (12 – 18 yrs)

[https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 – 18 yrs\)&=](https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen%20(12%20-%2018%20yrs)&=)

The screenshot shows a Postman API client interface. The URL in the header is `https://api.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen (12 - 18 yrs)&=`. The 'Params' tab is selected, showing two checked items: 'terms' with value 'Cancer' and 'AgeBin' with value 'Teen (12 - 18 yrs)'. In the 'Body' tab, the response is displayed as JSON. The JSON object has a 'total' field with the value 29, and a 'data' field which contains a single item. This item has fields: 'Title' (value: 'Pediatric Cancer: One Step at a Time'), 'ContentTypeID' (value: 182), 'ContentID' (value: 'S2029'), 'Sex' (value: ['Female', 'Male']), 'AgeBin' (value: ['Teen (12 - 18 yrs)']), and 'Source' (value: ['ShareWIK: Patient Perspective']). The status bar at the bottom indicates a 200 OK status with a time of 179 ms and a size of 54.56 KB.

- Sex: [Male, Female], if no value is specified, all resources are returned.

Query Params:

Terms – Breast Cancer,

aggregate filter(sex) – Male

[https://api.krames.com/v3/content/search?terms=Breast Cancer&sex=Male](https://api.krames.com/v3/content/search?terms=Breast%20Cancer&sex=Male)

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

This API call will retrieve all the articles related to the search terms “Breast Cancer” and aggregate filter (Sex = Male)

The screenshot shows a Postman API client interface. The URL in the header is `https://api.krames.com/v3/content/search?terms=Breast%20Cancer&sex=Male`. The 'Params' tab is selected, showing two entries: 'terms' with value 'Breast Cancer' and 'sex' with value 'Male'. In the 'Body' section, the response is displayed as a JSON object:

```
1 "total": 150,
2 "data": [
3     {
4         "Title": "Breast Cancer in Men",
5         "ContentTypeID": 85,
6         "ContentID": "P00150",
7         "Sex": [
8             "Male"
9         ],
10        "AgeBin": [
11            "Adult (18+)"
12        ],
13        "Source": [
14            "Greystone Adult"
15        ],
16    }
]
```

The status bar at the bottom indicates a 200 OK response with a time of 244 ms and a size of 84.67 KB.

- MediaType: [ Document, Streaming Media ]

Query Params:

Terms – Cancer

AgeBin - Teen (12 - 18 yrs)

Mediatype- Video

[https://api.staging.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen \(12 - 18 yrs\)&mediatype=Video](https://api.staging.krames.com/v3/content/search?terms=Cancer&AgeBin=Teen%20(12%20-%2018)%20yrs&mediatype=Video)

## Pagination

By default, search results are returned in pages of 10, starting at the first page. To paginate through the content, the `limit` and `offset` parameters are available.

ALL CONTENTS ARE CONFIDENTIAL

Confidential © Copyright 2024 WebMD Ignite. All rights reserved.

May not be reproduced or redistributed without the express permission of WebMD Ignite.

Setting the `limit` parameter will change the page size, and setting the `offset` will change where you are in the results.

The search results include a `total` value that indicates the total number of records in the result set. Using this `total`, `limit`, and `offset`, full pagination of the search results is available.

There are 4 examples listed below on how to use limit parameters and one example with limit and offset.

1. No limit parameters.

This will pull the first 10 results in the search query for the terms=cancer

Body Cookies Headers (10) Test Results

Pretty Raw Preview Visualize JSON

```
1
2   "total": 4870,
3   "data": [
4     {
5       "Title": "Anal Cancer: Stages",
6       "ContentID": 34,
7       "ContentID": "18990-1",
8       "Sex": [
9         "Female",
10        "Male"
11      ],
12      "AgeBin": [
13        "Adult (18+)"
14      ],
15      "Source": [
16        "Cancer Source"
17      ]
18    }
19  ]
20 }
```

2. Limit parameters set to >10 and <100

The below API call will retrieve first limit-20 results for the search term = cancer.

<https://api.krames.com/v3/content/search?terms=cancer&limit=20>

ALL CONTENTS ARE CONFIDENTIAL

May not be reproduced or redistributed without the express permission of WebMD Ignite.

Screenshot of Postman showing a GET request to <https://api.krames.com/v3/content/search?terms=cancer&limit=20>.

**Params:**

Key	Value	Description
terms	cancer	
limit	20	

**Body (Pretty JSON):**

```

1 {
2   "total": 4879,
3   "data": [
4     {
5       "Title": "Anal Cancer: Stages",
6       "ContentTypeID": 34,
7       "ContentID": "18990-1",
8       "Sex": [
9         "Female",
10        "Male",
11      ],
12      "AgeBin": [
13        "Adult (18+)"
14      ],
15      "Source": [
16        "Cancer Source"
17      ],
18      "MediaType": [
19        "Document"
20      ]
21    }
22  ]
23}
  
```

- limit parameter set to >100

<https://api.krames.com/v3/content/search?terms=cancer&limit=200>

The maximum resultset in an API call will always be 100. The below API call will only first pull 100 titles with the term cancer even if the limit is set to 200.

Screenshot of Postman showing a GET request to <https://api.staging.krames.com/v3/content/search?terms=cancer&limit=200>.

**Params:**

KEY	VALUE	DESCRIPTION
terms	cancer	
limit	200	

**Body (Pretty JSON):**

```

1 {
2   "total": 3982,
3   "data": [
4     {
5       "Title": "What Is Penile Cancer?",
6       "ContentTypeID": 34,
7       "ContentID": "18961-1",
8       "Sex": [
9         "Male",
10      ],
11      "AgeBin": [
12        "Adult (18+)"
13      ],
14      "Source": [
15        "Cancer Source"
16      ],
17      "MediaType": [
18        "Document"
19      ]
20    }
21  ]
22}
  
```

- limit parameter set to >10 and offset>2

<https://api.krames.com/v3/content/search?terms=cancer&limit=10&offset=2>

offset will change where you are in the resultset and will pull the first ten results from that location

The screenshot shows a POSTMAN interface with the following details:

- Method:** GET
- URL:** https://api.krames.com/v3/content/search?terms=cancer&limit=10&offset=2
- Params:** terms, limit, offset
- Body:** (empty)
- Headers:** Authorization, Headers (7), Body, Pre-request Script, Tests, Settings
- Query Params:** terms: cancer, limit: 10, offset: 2
- Response:** Status: 200 OK, Time: 326 ms, Size: 988.86 KB. The response body is a JSON object:

```
1 "total": 4870,
2 "data": [
3     {
4         "Title": "Bile Duct Cancer: Stages",
5         "ContentTypeID": 34,
6         "ContentID": "18858-1",
7         "Sex": [
8             "Female",
9             "Male"
10        ],
11        "AgeBin": [
12            "Adult (18+)"
13        ],
14        "Source": [
15            "Cancer Source"
16        ]
17    }
18 ]
```

## Selecting Fields

By default, the results contain the following fields:

1. Title
2. ContentTypeID
3. ContentID
4. Sex
5. AgeBin
6. Source
7. MediaType
8. Score (This is an internal field that represents the relevancy score)

The fields that are selected when a search is executed can be specified using the select parameter. `GET /v3/content/Search?select=Title,ContentTypeID,ContentID` would return only those 3 fields.

Available fields for selecting include:

- CollectionID
- RXNORM
- ICD10CM
- ICD10PCS
- NDC
- MediaType
- MESH
- SNOMED

ALL CONTENTS ARE CONFIDENTIAL

- HCPCS
- CPT
- LOINC

## Content & Terms blocking

The RESTful API now supports content & term blocking. This functionality prevents results to be displaced or that specific content from showing up in the response of the search endpoint. To enable this functionality, please reach out to the Ignite Education implementation team with the list of terms or content you want to be blocked from the search endpoint.

## Use Cases

### Related Content

Related content can be obtained by using MeSH codes from either a Get Content request, or by selecting the MeSH codes in the search response, and executing a second search request using the MeSH code as a filter. The resulting search results would include documents related to the source content.

Example:

Perform a search:

GET /v3/content/Search?terms=diabetes

Select a document and retrieve:

GET /v3/content/123-1234

In the response from the get content call, we can see a MeSH code in the metadata of that response. We could display this document to a user, along with related documents, by executing a search using the MeSH code that was present in the document:

Get related content:

GET /v3/content/Search?MESH=98765

The results returned from this related content search can be displayed along with the contents of the document being displayed to inform the user of other content that is related to the document they are looking at.

### Type 2 Diabetes

#### What is type 2 diabetes?

Type 2 diabetes is when your body can't make enough insulin, or use it well. Insulin helps your cells use sugar (glucose) for energy. Without insulin, glucose builds up in your blood. This leads to high blood sugar.

Type 2 diabetes is an ongoing (chronic) disease. It has no known cure. It's the most common type of diabetes.

#### What causes type 2 diabetes?

The exact cause of type 2 diabetes is not known. It seems to run in families. But it often takes other factors to bring on the disease. These include:

- Being overweight
- Not getting enough physical activity
- Taking certain medicines

#### Who is at risk for type 2 diabetes?

Risk factors include:

- **Age.** People ages 45 and older are at higher risk for diabetes.

A screenshot of a web page for "Type 2 Diabetes". At the top right is a green button labeled "Pay My Bill". Below it is a section titled "Related Items". A red oval highlights the "DISEASES AND CONDITIONS" section, which lists "Alcohol Use and People with Diabetes" and "Cardiovascular Disease and Diabetes", with a "View All 19" link. Another red oval highlights the "TESTS AND PROCEDURES" section, which lists "Diabetes During Pregnancy" and "Diet and Diabetes", with a "View All 6" link. At the bottom is a "PEDIATRIC DISEASES AND CONDITIONS" section with a single item, "Diabetes During Pregnancy".
